1 Preconditions

To complete the functional test case for “G4 Correction”, the company must have an established connection to the AS4-gateway, and have a functioning system user to DMS Import, see [Connectivity Guide & System Guide](#).

Furthermore, ensure that you for this test case have the correct URLs, Services, and Actions, as seen below. In place of {CVR} and {UUID}, fill out your own CVR and UUID in the URL below. While the URLs and Services are the same for all the test cases, the Actions however, will change depending on the test case you are performing, please keep an eye out that you have the correct Action for the test case in hand.

To submit the XMLs for this test case, use the following endpoint:

URL	TFE Service	Action
https://secureftpgatewaytest.skat.dk:6384/exchange/CVR_{CVR}_UI_{UUID}	DMS.Import2	Manifest.Submit
https://secureftpgatewaytest.skat.dk:6384/exchange/CVR_{CVR}_UI_{UUID}	DMS.Import2	Manifest.Amend

For retrieving the notification, use the following endpoint:

URL	TFE Service	Action
https://secureftpgatewaytest.skat.dk:6384/exchange/CVR_{CVR}_UI_{UUID}	DMS.Import2	Notification

Please ensure that the “**Test Case – G4 Temporary Storage**” have been completed **before** you try to complete the “**Test Case – G4 Correction**” scenarios.

2 Process flow

The process flow for a G4 Correction declaration can be seen in Figure 1 below:

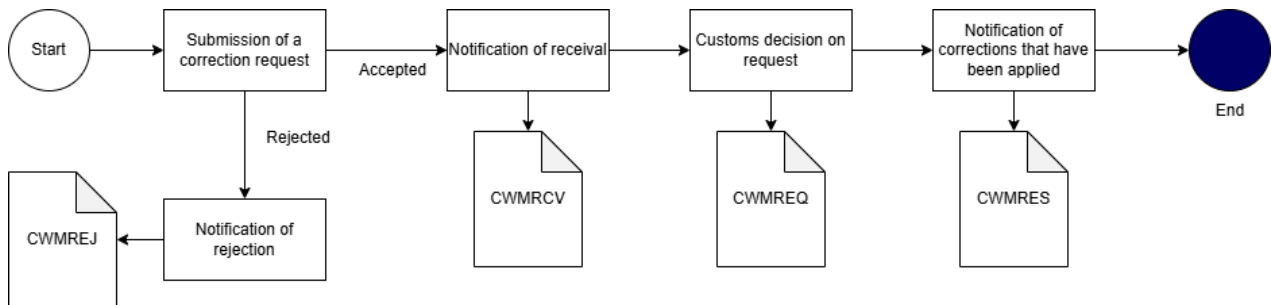

Figure 1: Process flow for G4 Correction declaration.

3 Test Scenarios

To complete this test case, test scenario 1 and 2 must be passed successfully. Descriptions and specifics for each test can be found in the coming sections. Be sure to go through the scenarios thoroughly. It is recommended that you use the attached files to test the notifications.

Test no.	Test scenario	Passed/Failed
1	Submit G4 Correction declaration, which is accepted	<input type="checkbox"/>
2	Submit G4 Correction declaration, which is rejected	<input type="checkbox"/>

3.1 Description of test scenarios

The following sections will describe the aim of each specific scenario and provide the desired results of the test scenarios. It is worth noting that there can be changes in the notifications provided by DMS Import as the solution is still in development.

The purpose of the test scenarios is to ensure your connection to the system, and that you as a company can receive the correct notifications when sending in XMLs. Each step describes what you need to do when going through the test case. In the folder where you found this test case document an XML corresponding to the acceptance test case will be available. This can be adapted for the rejection case.

3.2 Test scenario 1 – Acceptance

The aim of this scenario is to get a notification that the G4 Correction XML has been accepted.

The following table shows the necessary test steps for completing this scenario as well as expected results. For the first step it is recommended using the provided declaration **XML** found in the Test Case folder. Secondly, make sure that the Submitter field is correct (this is done by putting your **CVR** in the Submitter/Name and Submitter/ID fields) while your **LRN** and **MRN** are filled out correctly. The fields **DeclarantEORI**, **ConsigneeEORI**, and **ConsignorEORI** should also be filled out with the corresponding EORI numbers for the Declarant, Consignee, and Consignor roles and the **WarehouseID** should be filled out with a valid warehouse. You should also make sure that the **Amendment** field is filled with a valid **ChangeReasonCode** and a **ChangeReasonText** of at least 10 characters, as described in step 5. The placeholders are denoted in the XML by double curly brackets {{placeholder}}.

Step no.	Description of steps	Expected result	Passed
1	Submit a G4 Temporary Storage XML (you can use the G4 Temporary Storage XML from the G4 Temporary Storage test case). It is found within the G4 Temporary Storage folder that is found in the parent directory at G4 Test Cases (remember to replace the placeholders)	You should have the test XML ready for the next step	<input type="checkbox"/>
2	Submit the declaration using the conditions found under Pre-conditions	The declaration should be sent to the system	<input type="checkbox"/>
3	Pull the notifications	You should be able to pull the notification from the system	<input type="checkbox"/>
4	Registration of submission of declaration	Receive a CWMRCV notification	<input type="checkbox"/>
5	Use the provided G4 Correction XML found in the test case folder (remember to replace the placeholders) – {{LRN}} and {{MRN}} should match the MRN and LRN from the initially submitted G4 declaration)	Find the G4 Correction XML in the G4 Correction test case folder	<input type="checkbox"/>
6	Submit the G4 Correction XML	The G4 Correction XML should be sent to the system	<input type="checkbox"/>
7	Pull the notifications	You should be able to pull notification from the system	<input type="checkbox"/>
8	Acceptance of submission of correction request by receiving the CWMRCV , CWMREQ and CWMRES notifications	Receive CWMRCV , CWMREQ and CWMRES notifications and pass the test	<input type="checkbox"/>

3.3 Test scenario 2 – Rejection

The aim of this scenario is for the EO to get a notification that the G4 Correction XML has been rejected.

The following table shows the necessary test steps for completing this scenario as well as expected results. For the first step it is recommended using the provided declaration **XML** found in the Test Case folder. Secondly, make sure that the Submitter field is correct (this is done by putting your **CVR** in the Submitter/Name and Submitter/ID fields) while your **LRN** and **MRN** are filled out correctly. The fields **DeclarantEORI**, **ConsigneeEORI**, and **ConsignorEORI** should also be filled out with the corresponding EORI numbers for the Declarant, Consignee, and Consignor roles and the **WarehouseID** should be filled out with a valid warehouse. You should also make sure that the **Amendment** field is filled with a valid **ChangeReasonCode** and a **ChangeReasonText** of at least 10 characters, as described in step 5. The placeholders are denoted in the XML by double curly brackets {{placeholder}}.

Step no.	Description of steps	Expected result	Passed
1	Submit a G4 Temporary Storage XML (you can use the G4 Temporary Storage XML from the G4 Temporary Storage test case). It is found within the G4 Temporary Storage folder that is found in the parent directory at G4 Test Cases (remember to replace the placeholders)	You should have the test XML ready for the next step	<input type="checkbox"/>
2	Submit the declaration using the conditions found under Pre-conditions	The declaration should be sent to the system	<input type="checkbox"/>
3	Pull the notifications	You should be able to pull the notification from the system	<input type="checkbox"/>
4	Registration of submission of declaration	Receive a CWMRCV notification	<input type="checkbox"/>
5	Use the provided G4 Correction XML found in the test case folder (remember to replace the placeholders) – {{LRN}} and {{MRN}} should match the MRN and LRN from the initially submitted G4 declaration)	Find the G4 Correction XML in the G4 Correction test case folder	<input type="checkbox"/>
6	Adapt the G4 Correction XML with the information with the invalid data in the element Amendment as shown in section 3.3.1, to ensure rejection of the XML.	Adapt the G4 Correction XML in the G4 Correction test case folder or use your own	<input type="checkbox"/>
7	Submit the XML	The adapted G4 Correction XML request should be sent to the system	<input type="checkbox"/>
8	Pull notifications	You should be able to pull notification from the system	<input type="checkbox"/>
9	Rejection of a submission of correction request by receiving the CWMREJ notification	Receive the CWMREJ notification and pass the test	<input type="checkbox"/>

3.3.1 XML example

```
<ns3:Amendment>  
  <ns3:sequence>  
    <ns3:Numeric.Content>1</ns3:Numeric.Content>  
  </ns3:sequence>  
  <ns3:ChangeReasonCode>  
    <ns3:Code.Content>100</ns3:Code.Content>  
  </ns3:ChangeReasonCode>  
  <ns3:ChangeReasonText>  
    <ns3:Text.Content>Return of goods to supplier</ns3:Text.Content>  
  </ns3:ChangeReasonText>  
</ns3:Amendment>
```
