Change log

Ver-sion	Date	Author	Status	Comments
1.0	18-12-2024	Cina Arjmand	Final	Original first version containing Release 6.1.5-RC11 de-scription.
1.1	29-01-2025	Uffe Bundesen	Final	Updated with notes from Release 6.1.5-final and 6.1.5-RC12.
1.2	06-03-2025	Johan Lövberg	Final	Updated with notes from release 6.1.5.1-RC2, 6.1.5.1-RC3,6.1.5.1-RC3.1, 6.1.5.1-RC3.2, 6.1.5.1-RC3.3 and 6.1.5.1-final.

1 Introduction

This document lists the changes released to TFE02 environment from December 2024 and onwards. These changes will include both descriptions of fixes for known issues, and descriptions of any new features.

The content will be presented with the most current issues and fixes at the beginning of these release notes, while the oldest issues and fixes will be found at the end of these release notes. Each bug fix is annotated with a reference number, as well as a Remedy case number if it is relevant for the bug fix.

2 Release 6.1.5.1-final

Environment	Release date
PROD	N/A
TFE02	06-03-2025

2.1   H1 Declaration remains stuck in validation after submitting H4

Ref: FT-35261	
Description	When submitting and clearing a H4 declaration with 1 goods item in TP UI, and then submitting a H1 declaration, the H1 declaration then gets stuck in validation
Fix	The underlying issue was fixed.
Impact	H1 is now accepted in this scenario

2.2   Unable to submit Bill of Discharge through TP-UI for H4 declaration

Ref: FT-35187, PSD-9791	
Description	Users were unable to submit a Bill of Discharge message through TP-UI for an H4 declaration when attempting to discharge goods from a first H4 declaration with another H4 declaration.
Fix	The underlying issue was fixed.
Impact	Can now successfully submit BoD messages through the TP-UI for H4 declarations

2.3   Unable to find declaration with LRN set as 'LRN' in Trader Portal UI

Ref: FT-35150, PSD-9906	
Description	When submitting a declaration via TP UI with the LRN equal to 'LRN', the declaration will successfully submit but cannot be found in TP
Fix	The underlying issue was fixed.
Impact	It is now possible to find the declaration when submitting with 'LRN'

2.4   Application Period for Discharge is set to minutes

Ref: FT-35124, PSD-9859	
Description	When applying an 8f to a H3 Declaration, the period of discharge is incorrectly set to display in minutes.
Fix	The underlying issue was fixed.
Impact	The label for Application Period for Discharge now correctly displays the period without specifying minutes

2.5   Last date of Discharge is not visible in Trader Portal UI

Ref: FT-35123, PSD-9858	
Description	When applying a 8f to a H3 Declaration, and having the declaration reach 'Goods Released', the last date of discharge is not visible in TP UI
Fix	The underlying issue was fixed.
Impact	The last date of discharge is now displayed under the Expiration Date in Goods Accounting as expected

2.6   I2EIDR Group 15 Acceptance Date cannot be corrected

Ref: FT-35107, PSD-9855	
Description	The date and time selection box disappears after multiple attempts to change the acceptance date in group 15 of the TP UI.
Fix	The underlying issue was fixed.
Impact	Users can now change the acceptance date and time without the selection box disappearing.

2.7   When selecting Bill of Discharge from the Trader Portal actions, a new declaration is submitted

Ref: FT-35056, PSD-9791	
Description	When selecting to submit a BoD from the Trader Portal UI actions, the user is redirected to submit a new declaration instead of a BoD.
Fix	The underlying issue was fixed.

| Impact | Users are now redirected to the BoD submission page rather than a new declaration submission page |

2.8 DE 12 04 000 000 is incorrectly shown in the Trader Portal UI

Ref: FT-35048, PSD-9808	
Description	The DE 12 04 000 000 is incorrectly displayed in the UI under the Declaration/Master tab which should not be visible on G4 or G4G3 declarations
Fix	The underlying issue was fixed.
Impact	The DE 12 04 000 000 is now not shown on a G4 or G4G3 declaration

2.9 Trader Portal UI shows 2 data elements for G4 declaration in Group 18 Goods Identification

Ref: FT-35009, PSD-9783	
Description	The TP incorrectly displays two data elements in Declaration/Master Group18 Goods Identification for G4 declarations.
Fix	The underlying issue was fixed.
Impact	Only one data element "Total gross mass" is now shown in the Declaration/Master Group 18 Goods Identification for G4 D

2.10 Previous document type dropdown codelist is incorrect om House/House item level for G4G3

Ref: FT-34975, PSD-9810	
Description	In G4G3 declarations, the dropdown codelist for document type in DE 12 01 previous document at House/House Item level displays support document options instead of previous document options
Fix	The underlying issue was fixed.
Impact	The correct codelist for previous documents is now displayed in the dropdown at House/House Item level

2.11 DE 12 01 displays an incorrect heading in Trader Portal

Ref: FT-34963, PSD-9735	
Description	The heading of DE 12 01 does not match the EUCDM in English showing "Simplified declaration / Previous documents" instead of just "Previous documents"
Fix	The underlying issue was fixed.
Impact	Now displays the correct heading which is just "Previous documents"

2.12 Goods accounting data for H2 is not visible in Trader Portal

Ref: FT-34958, PSD-9728	
Description	The goods accounting data is not displayed in the TP UI for H2 declarations
Fix	The underlying issue was fixed.
Impact	Goods accounting now correctly reflects the available goods for H2 declarations in TP

2.13 Incorrect period label in DMS Online / Trader Portal

Ref: FT-34940	
Description	In an 8f application form, the field is incorrectly labeled as "Periode (minutter) in DMS online / TP
Fix	The underlying issue was fixed.
Impact	The field is now correctly labeled as "Periode" in the application tab

2.14 No validation check on UN LOCODE 14 01 036 000 on header level

Ref: FT-34939	
Description	When a declaration is submitted there is no validation check on UN/LOCODE in DE 14 01 036 000 on header level, meaning you could enter a non-valid UN / LOCODE and have the declaration pass.
Fix	The underlying issue was fixed.
Impact	The declaration is correctly rejected because of a wrong UN / LOCODE.

2.15 Translation of Guarantee Amount (DK) in field 99 03 071 is missing from Trader Portal

Ref: FT-34929	
Description	Even if the language selected is Danish, the Guarantee Amount (DK) in field 99 03 071 000 is displayed in the wrong language in TP
Fix	The underlying issue was fixed.
Impact	The Guarantee Amount is now shown correct depending on which language has been selected

2.16 Translation of Draft and Template is missing from Trader Portal

Ref: FT-34911, PSD-9742	
Description	Under the 'Search draft/template' tab, and 'Application type', both Draft and Template are written in English even when the Danish language is selected.
Fix	The underlying issue was fixed.
Impact	Draft and Template are now correctly displayed depending on the language which has been selected.

2.17 Data Element 16 03 000 000 refers to the wrong code list

Ref: FT-34900, PSD-9751	
Description	The DE 16 03 000 000 Bestemmelsesland under group 16 refers to the wrong code list and only EU countries should be allowed.
Fix	The underlying issue was fixed.
Impact	A drop down list only containing EU countries is now shown.

2.18 Missing validation information on generic error messages in Trader Portal UI

Ref: FT-34884, FT-34883, FT-34878, FT-34873, PSD-9029	
Description	When getting a validation result on BR_VALI_0401_53, BR_VALI_0202_21, BR_VALI_0101_34, and BR_VALI_0101_98, there is no error text displayed
Fix	The underlying issue was fixed.

Impact	The validation information is now displayed on the given error messages

2.19 Data Element 11 10 000 000 contains a dropdown codelist that is missing text explanations

Ref: FT-34862, PSD-9842	
Description	When a declaration is submitted though TP and the user navigates to group 11 and DE 11 10 000 000, there is a dropdown codelist which contains no explanation text after each code.
Fix	The underlying issue was fixed.
Impact	The dropdown codelist now has a text description of what the codes are.

2.20 G3 referencing an unknown MRN gets stuck in submitted

Ref: FT-34846, PSD-9662	
Description	When submitting a G3 declaration with an unknown MRN in 12 01 001 (Previous Document reference), the declaration gets stuck in submitted.
Fix	The underlying issue was fixed.
Impact	The declaration now correctly continues through the validation process, and gets rejected with an error message asking for an existing MRN.

2.21 Search fields lacked proper input validation

Ref: FT- 34843, PSD-9659	
Description	Several search fields in the Trader Portal (Commodity code, Importer reference number, MRN/ARC, and LRN) had no character limitations, allowing users to enter excessive text or potentially harmful scripts that could cause interface instability.
Fix	Input validation was implemented to limit the number of characters that can be entered in search fields and to prevent script injection.
Impact	Users now experience a more stable and secure search interface, with appropriate character limits preventing both accidental and intentional entry of excessive text that could cause performance issues.

2.22 Missing data element numbers for fiscal references

Ref: FT- 34835	
Description	In the Trader Portal interface, the data element "Supplerende fiscale referencer" (Additional fiscal references) in group 13 was displayed without its corresponding data element number (13 16 000 000).
Fix	The interface was updated to display the complete data element name including its number: "Supplerende fiscale reference 13 16 000 000".
Impact	Users now see consistent naming of data elements including their reference numbers across both the Trader Portal interface, making it easier to identify and reference specific data elements.

2.23 Business rule for G4G3 declarations was inconsistently applied

Ref: FT- 34827, PSD-9646	
Description	Business rule BR10015_060, which requires the declarant and consignor to be different entities in G4G3 declarations, was only being applied when the declaration included house consignment elements.
Fix	The system was updated to consistently apply the business rule for all G4G3 declarations, regardless of whether house consignment elements are present.
Impact	All G4G3 declarations now undergo consistent validation against business rule BR10015_060, ensuring proper enforcement of the requirement for different declarant and consignor entities.

2.24 Declarations with CERTEX documents became stuck in processing

Ref: FT- 34817, PSD-9673	
Description	Declarations containing CERTEX documents were becoming stuck in "Pending Validation" status without generating timeout tasks, preventing them from progressing through the customs clearance process.

Fix	The system was updated to properly handle document identifiers in CERTEX requests and create timeout tasks when necessary.
Impact	Declarations with CERTEX documents now either process correctly or generate appropriate timeout tasks that allow customs officers to manually intervene, ensuring that declarations do not become permanently stuck in the system.

2.25 Incorrect translation of container identification field

Ref: FT- 34815	
Description	The data element 19 06 061 000 (Container identification) was incorrectly translated in the Danish language version of the interface across all declaration systems.
Fix	The translation was corrected to properly display the field name in Danish.
Impact	Now the correct translation is used for the container identification field.

2.26 Missing goods reference field in declaration interfaces

Ref: FT- 34813, PSD-9753	
Description	The data element 19 07 044 000 (Goods reference) was missing from the user interfaces for H1-H5 and I1-I2 declarations, despite being a required field according to the EU Customs Data Model.
Fix	The system was updated to include the Goods reference field in the appropriate declaration forms within the Transport Equipment section.
Impact	Users can now properly enter and view goods reference information when working with transport equipment in declarations, ensuring compliance with EU data requirements.

2.27 Party management system incorrectly updated capabilities dates

Ref: FT- 34809	
Description	The party management system was updating the validity dates of office capabilities with each user login, causing office roles to appear invalid for use in declarations.
Fix	The system was modified to update only the "valid to" date when users log in, preserving the original "valid from" date to maintain proper validity periods for office capabilities.

Impact	Office capabilities now maintain their proper validity periods, ensuring that declarations using these offices are not incorrectly rejected due to apparent validity issues.

2.28 Import declarations incorrectly required SCO office role

Ref: FT- 34807, PSD-9628	
Description	The system was incorrectly requiring the Supervising Customs Office (SCO) role for customs offices on import declarations, even though this role is only applicable for export in centralized clearance scenarios.
Fix	The validation rules were updated to remove the SCO role requirement for customs offices on import declarations.
Impact	Users can now successfully submit import declarations with standard customs office designations without receiving incorrect rejections related to office roles.

2.29 Incorrect validation of Proof of Union Status requirements

Ref: FT-34746, PSD-9595	
Description	The system was incorrectly applying Proof of Union Status (PoUS) validation rules to H1 declarations and rejecting them when statistical values exceeded 15,000 EUR, even though these rules should only apply to H5 declarations.
Fix	The validation rules were updated to only apply PoUS requirements to H5 declarations, and to properly recognize declared PoUS numbers when validating H5 declarations with high statistical values.
Impact	Users can now successfully submit H1 declarations with statistical values over 15,000 EUR without rejection, and H5 declarations with proper PoUS documentation are correctly validated, eliminating unnecessary rejections.

2.30 Customs office of presentation incorrectly required for standard declarations

Ref: FT-34726, PSD-9624	

Description	The system was incorrectly requiring the Customs office of presentation (17 09 000 000) data element for all declarations, even though this field should only be required for centralised clearance scenarios according to EU Customs Data Model.
Fix	The validation rules were updated to only require Customs office of presentation when centralised clearance is being used.
Impact	Users can now submit standard declarations without having to provide unnecessary Customs office of presentation information, streamlining the declaration process for non-centralised clearance scenarios.

2.31 Previous document data elements displayed incorrectly

Ref: FT-34697, PSD-9593	
Description	When submitting declarations with previous document information, the CategoryCode and TypeCode data elements were incorrectly combined and displayed as a single value in the Trader Portal interface.
Fix	The system was updated to properly separate and display the CategoryCode and TypeCode data elements for previous documents.
Impact	Users now see correctly formatted previous document information in the interface, ensuring clarity and preventing confusion when reviewing declaration data.

2.32 Amendment submissions were being validated against incorrect code list

Ref: FT- 34688, PSD-9546	
Description	When submitting amendment requests in the Trader Portal, users were selecting reasons from code list 10057, but the system was validating these selections against code list 10187 (intended for invalidations), potentially causing incorrect rejections.
Fix	The system was updated to ensure that amendment reason validation uses the same code list (10057) that is presented to users in the interface.

Impact	Users can now submit amendment requests with confidence that the reason codes available in the dropdown menu will pass validation, eliminating confusing rejection messages.

2.33 H6 declarations displayed incorrect data element labels for postal charges

Ref: FT- 34585, PSD-9431	
Description	The H6 declaration form incorrectly referenced and displayed data elements from H7 declarations, showing "14 15" (Transport Costs) labels instead of the correct "14 13" (Postal Charges) labels.
Fix	The system was updated to correctly display the proper data element labels for H6 declarations, ensuring that group 14 13 elements are properly identified as Postal Charges rather than Transport Costs.
Impact	Users now see accurate and consistent labeling when working with H6 declarations, preventing confusion between postal charges (14 13) and transport costs (14 15) data elements.

2.34 System incorrectly allowed Bill of Discharge for H3 declarations

Ref: FT- 34426, PSD-9332	
Description	The system was allowing users to enable Bill of Discharge functionality for H3 declarations with procedure code 8f, sending CWMBOD notifications to traders even though Bill of Discharge is not applicable for this declaration type.
Fix	The system was updated to prevent Bill of Discharge from being enabled for H3 declarations, ensuring that the checkbox cannot be selected during customs position application processing.
Impact	Traders and customs officers now experience the correct workflow for H3 declarations with procedure code 8f, preventing confusion from receiving inapplicable Bill of Discharge notifications.

2.35 H3 declarations could not be presented through Manifest

Ref: FT- 34418, PSD-9314	
Description	Users were unable to create arrival declarations for H3 declarations in Manifest due to DMS returning an incorrect status

	code (0) in the IEI79A response instead of the expected status code (3).
Fix	The system was updated to return the correct status code in the IEI79A response for eligible H3 declarations.
Impact	Users can now successfully create arrival declarations for H3 declarations through Manifest, enabling proper presentation of goods and continuation of the customs clearance process.

2.36 G4G3 declarations were not sent for risk assessment

Ref: FT- 34415, PSD-9308	
Description	After acceptance of G4G3 declarations and completion of the Manual Calculation of Remaining Days work task, the system was not sending risk assessment requests to KRIA as required.
Fix	The system was updated to correctly trigger risk assessment requests for G4G3 declarations following acceptance and work task completion.
Impact	G4G3 declarations now properly undergo risk assessment in KRIA, ensuring that all required security and compliance checks are performed before goods can proceed through the customs process.

2.37 G4G3 declarations were proceeding despite blocking control results

Ref: FT- 34404, PSD-9288	
Description	When control results indicated major discrepancies that should block release, G4G3 declarations were incorrectly proceeding to "Goods Released" status instead of being invalidated.
Fix	The system was updated to properly interpret control results with major discrepancies and block the release of affected goods as required.
Impact	The system now correctly handles control results for G4G3 declarations, ensuring that goods with major discrepancies are properly blocked from release while allowing unaffected goods to proceed through the customs process.

2.38 Special Procedure timer was expiring prematurely

Ref: FT- 34393, PSD-9277	

Description	The "Time Window before sending a notification to the trader for the expiration of the special procedure authorization goods discharge period" timer was expiring immediately upon creation instead of on its scheduled expiration date.
Fix	The system timing mechanism was corrected to ensure that Special Procedure timers remain active until their proper expiration date.
Impact	Traders and customs officers now receive timely and accurate notifications regarding the expiration of special procedure authorizations, allowing proper planning for goods discharge within the authorized period.

2.39 Control state remained "In Progress" after control completion

Ref: FT- 34389, PSD-9224	
Description	When a declaration underwent risk-based control, the control state was set to "In Progress" but failed to update even after the control was completed and the declaration reached "Clearance provided (goods released)" status.
Fix	The system was updated to properly transition the control state from "In Progress" to the appropriate final state upon completion of control activities.
Impact	Users now see accurate control state information throughout the declaration lifecycle, providing clarity on whether controls have been completed or are still in progress.

2.40 Invalidation (4C) request shows extra fields that should be hidden

Ref: FT-34370, PSD-9318, FT-34369, FT-34368, FT-34367, FT-34365, FT-34364	
Description	When traders submitted invalidation and remission (RRM) requests through the Trader Portal, the interface was displaying data elements that should have been hidden.
Fix	The user interface for invalidation requests was updated to remove unnecessary data elements.
Impact	The following elements are no longer visible: • Bank Details (VIII/14) • Customs Office Location (VIII/3) • Customs Office Notified (VIII/2) • Recovery Titles (VIII/1)

| | • Application Date (4/2) |
| | • Application Signature (1/2) |

2.41 G4G3 declarations became stuck after amendment

Ref: FT-34358, PSD-9239	
Description	When users submitted amendments to G4G3 declarations that were in "Accepted" status but had not yet undergone control, the declarations would become stuck in the system without progressing.
Fix	The system was updated to properly handle amendments to G4G3 declarations in early processing stages.
Impact	Users can now successfully amend G4G3 declarations at any stage of processing without experiencing delays or declarations becoming stuck in the system.

2.42 Control state remained "In Progress" after completing partial release

Ref: FT-34338, PSD-9208	
Description	After completing partial release with controls and releasing all goods items, the control state incorrectly remained as "In Progress" instead of updating to "Finalized."
Fix	The system was updated to correctly transition the control state to "Finalized" when all control tasks are completed and all goods items are released in partial release scenarios.
Impact	Users now see accurate control state information for partial release cases, providing clarity on whether all control activities have been completed.

2.43 Added values for additions and deductions were being lost

Ref: FT-34325, PSD-9217	
Description	When users manually entered values in the "Additions and Deductions" field (14 04 000 000) while creating a declaration, these values would disappear upon submission.
Fix	The system was updated to properly retain values entered in the "Additions and Deductions" field during declaration submission.
Impact	Users can now confidently enter additions and deductions values when creating declarations, knowing that these values

	will be preserved throughout the submission process and appear correctly in the final declaration.

2.44 Missing field titles in G3 presentation notifications

Ref: FT-34271, PSD-9230	
Description	When creating G3 presentation notifications in the Trader Portal, some data fields in group 13 were displayed without titles or names, making it difficult for users to identify what information was required.
Fix	The system was updated to display proper titles for all data fields in G3 presentation notifications.
Impact	Users can now clearly identify all fields when creating G3 presentation notifications, improving the ease of data entry and reducing potential errors.

2.45 H1 declarations with processed products incorrectly accepted

Ref: FT-34254, PSD-9314	
Description	The system was incorrectly accepting H1 End-Use declarations with 8f applications that contained processed products information, which should only be allowed for inward or outward processing procedures.
Fix	The system validation was updated to properly reject H1 declarations that incorrectly include processed products information.
Impact	The system now correctly enforces data requirements for different declaration types, preventing users from submitting H1 declarations with processed products information that is only applicable to inward or outward processing procedures.

2.46 Amendment requests could be processed while declarations were locked

Ref: FT-34242, PSD-9781	
Description	The system was incorrectly allowing amendment requests to be processed for I1 declarations that were locked due to pending customs debt handling, creating premature "Customs Position on Message" work tasks.
Fix	The system was updated to prevent processing amendment requests for locked declarations until the Handle Customs Debt work task is completed.

Impact	The system now properly respects the declaration lock state, ensuring that amendments are only processed after all required customs debt handling is completed, maintaining the integrity of the declaration workflow.

2.47 Customs office field lacked autocomplete functionality

Ref: FT-34025, PSD-9086	
Description	The Customs office field (16 15 047 000) in the Trader Portal was implemented as a free-text field instead of providing autocomplete functionality, making it difficult for users to select valid office codes.
Fix	The system was updated to implement autocomplete functionality for the Customs office field, allowing users to select from a dropdown list of valid options.
Impact	Users can now more efficiently enter customs office information with reduced errors by selecting from a filtered list of valid options as they type, improving data entry speed and accuracy.

2.48 Control result discrepancies not automatically applied to declarations

Ref: FT-33940	
Description	When control results identified minor discrepancies of type "Add" or "Delete" with Manual Correction set to "No," the system was not automatically applying these changes to declarations as required.
Fix	The system was updated to properly apply all types of minor discrepancies (Add, Delete, and Update) to declarations when Manual Correction is set to "No."
Impact	Control results with minor discrepancies are now automatically applied to declarations when appropriate, eliminating the need for manual intervention and ensuring that declarations accurately reflect the actual goods being processed.

2.49 Discharge periods from authorizations not correctly applied

Ref: FT-33904, PSD-9113	
Description	For declarations using special procedure authorizations, the system was not correctly retrieving and applying the period of

	discharge from DK-CRS, instead defaulting to a standard 10-day period.
Fix	The system was updated to correctly retrieve and apply the authorized period of discharge from DK-CRS when processing declarations with special procedure authorizations.
Impact	Users now see accurate discharge period timers that reflect the actual authorized periods in DK-CRS, ensuring proper tracking and management of goods under special procedures.

2.50 Declaration rejections lacked clear error messages

Ref: FT-33754, PSD-8803	
Description	When I1 declarations were rejected, the system was not providing specific error codes or reasons for the rejection, making it difficult for users to understand and fix the issues.
Fix	The system was updated to include clear error codes and descriptions in rejection messages, both in the Trader Portal interface and in CWMREJ notifications.
Impact	Users now receive detailed information about why their declarations are rejected, allowing them to quickly identify and correct issues without having to contact support for clarification.

2.51 Previous documents section contained incorrect data elements

Ref: FT- 33573, PSD-8796	
Description	The Previous Documents section (12 01) in the Trader Portal contained an invalid data element ("Value") and was missing several required data elements according to the EU Customs Data Model.
Fix	The system was updated to remove the invalid "Value" data element and add the missing required data elements to the Previous Documents section.
Impact	Users now see the correct data elements in the Previous Documents section, ensuring compliance with EU standards and enabling proper entry of previous document references.

2.52 CERTEX certificate Y123 validation fails for missing tonnesOfCO2 value

Ref: FT- 35349, PSD-10066	

Description	When submitting declarations with F-Gas certifications (Y123, C079), an error message "CertificateDataDTO.con-signmentItem.tonnesOfCO2 null is not compliant" appears
Fix	The underlying issue was fixed.
Impact	Y123 primary certificate type now correctly works when paired with a secondary certificate type that populates the tonnesOfCO2 value in IES messages.

2.53 Rejected 8f requires decision period for discharge

Ref: FT- 35113, PSD-9847	
Description	When receiving a rejection on an 8f application for a H3 declaration, the system requires you to fill out the decision period for discharge
Fix	The underlying issue was fixed.
Impact	The declaration is now simply denied when receiving the rejection, causing both the combined declaration plus application to be rejected.

3 Release 6.1.5.1-RC3.3

Environment	Release date
PROD	N/A
TFE02	06-03-2025

3.1 Users experienced incorrect mandatory field indicators in G3 declarations

Ref: FT- 35175	
Description	Mandatory data elements for G3 declarations were not properly marked with indicators in the Trade Portal interface.
Fix	The system has been updated to correctly mark all required fields as mandatory in both interfaces.
Impact	Users can now clearly identify which fields must be completed when creating G3 declarations, reducing errors and improving the declaration submission process.

3.2 Goods Registration Entries were not visible for risk assessment

Ref: FT- 35148	
Description	When creating a Goods Registration Entry (GRE) for weight discrepancies between declarations and manifest, the entries were not appearing in KRIA for customs officials to perform risk assessment.
Fix	The system was updated to correctly send GREs to KRIA with the proper declaration type designation.
Impact	Customs officials can now view and perform risk assessment on all Goods Registration Entries, ensuring proper oversight of weight discrepancies between declarations and actual shipments.

3.3 H2 declarations incorrectly triggered Manual Cash Payment requirements

Ref: FT-35103	
Description	H2 declarations with procedure code 71 51 000 were incorrectly triggering Manual Cash Payment tasks despite qualifying for 100% duty suspension.
Fix	The system configuration was updated to correctly recognize procedure code 71 51 000 as eligible for full duty suspension.

Impact	Users submitting H2 declarations with procedure code 71 51 000 will no longer encounter unnecessary Manual Cash Payment requirements, streamlining the declaration process.

3.4 G5 declarations were being rejected due to incorrect location reference

Ref: FT-35060	
Description	Users were unable to submit G5 declarations as the system was incorrectly validating location information, causing declarations to fail with error BR_VALI_10015_13.
Fix	The system configuration was updated to correctly reference location data within the declaration structure.
Impact	Users can now successfully submit G5 declarations without receiving validation errors related to location information, enabling proper transfer between storage facilities.

3.5 Data element incorrectly displayed in declaration item view

Ref: FT- 35050, PSD-9789	
Description	Data element 12 08 000 000 was incorrectly appearing at the Master Item level in G4 declarations within Trader Portal interface.
Fix	The system was updated to remove the data element 12 08 000 000 from the Master Item and House Item views where it should not appear.
Impact	Users now see the correct data structure when working with G4 declarations, preventing confusion and ensuring proper data entry according to EUCDM standards.

3.6 Missing error message for rejected G3 presentation notifications

Ref: FT- 35023	
Description	When G3 presentation notifications were rejected due to business rule validation, the rejection notification (CWMREJ) did not include a specific error text explaining why the notification was dismissed.
Fix	The system was updated to include appropriate error text for validation failures in rejection messages.
Impact	Users now receive clear error messages explaining why their G3 presentation notifications are rejected, allowing them to correct issues more efficiently.

3.7 G5 declarations were being rejected despite having valid Customs Office codes

Ref: FT- 34993	
Description	Users attempting to submit G5 declarations with valid Customs Office IDs were experiencing rejections due to business rule BR_VALI_10015_14, which incorrectly flagged valid office codes as invalid.
Fix	The system configuration was updated to properly connect the business rule with the correct Customs Office code list (CL 10209).
Impact	Users can now successfully submit G5 declarations with valid Customs Office codes without experiencing incorrect validation rejections.

3.8 Data element 12 01 displayed incorrect heading in user interfaces

Ref: FT- 34963, PSD-9735	
Description	The heading for data element 12 01 in Trader Portal interface did not match the standard heading specified in EUCDM.
Fix	The heading text was updated to correctly match the EUCDM standard terminology.
Impact	Users now see consistent and correct terminology in the interfaces, improving clarity and ensuring alignment with EU customs standards.

3.9 Manual release tasks displayed incorrect category for INF documents

Ref: FT- 34750	
Description	When a declaration contained supporting document type C710 (INF), the system created a manual release task with an incorrect category label showing "Supporting Document Type has value C605 or C700" instead of "INF".
Fix	The English description in the reference data was updated to correctly display "INF" as the task category for C710 supporting documents.
Impact	Customs officers now see the correct task category when processing declarations with INF documents, improving clarity and ensuring proper handling of these special document types.

3.10 Users unable to use required document codes for G4 declarations

Ref: FT- 34618	
Description	When submitting G4 declarations with certain previous document types, users received rejection messages instructing them to use Z-codes that were not available in the system's dropdown menus.
Fix	The reference data was updated to include the appropriate document codes in the selection options, aligning with Denmark's document code requirements.
Impact	Users can now select the correct document codes when submitting G4 declarations, preventing unnecessary rejections and ensuring successful submission of declarations with proper document references.

3.11 Declarations incorrectly triggered Manual Cash Payment despite valid guarantee coverage

Ref: FT- 33911	
Description	H1/I1 declarations with valid SKAT Security Scheme coverage were incorrectly triggering Manual Cash Payment tasks, requiring unnecessary customs officer intervention.
Fix	The system was updated to correctly recognize declarations covered by the permille scheme (national guarantee for existing customs debt) and prevent unnecessary Manual Cash Payment tasks.
Impact	Declarations with valid guarantee coverage now proceed directly to goods release without requiring manual payment processing, streamlining the clearance process for qualifying traders.

3.12 Mandatory fields not properly indicated in H6 declarations

Ref: FT- 33552	
Description	In Trader Portal, only declaration type and additional declaration type were marked as mandatory for H6 declarations, while other required fields lacked proper indication.
Fix	The system was updated to correctly mark all mandatory fields with an asterisk indicator in the Trader Portal interface, particularly including Gross Mass (D.E. 18 04 001 000) at the appropriate level.
Impact	Traders can now clearly identify which fields must be completed when creating H6 declarations in the Trader Portal,

	reducing errors and improving the declaration submission process.

Environment	Release date
PROD	N/A
TFE02	06-03-2025

4.1   Data element in Group 15

Ref: FT-35085	
Description	The data element in Group 15 at goods item level was incorrectly displayed as "15 09 000 000" instead of the expected "15 09 001 000" in TP UI when creating H declarations.
Fix	The data element identification was corrected to properly display "15 09 001 000" as required by the declaration specifications.
Impact	Users can now see and work with the correct data element identification when processing H declarations, ensuring compliance with declaration requirements.

4.2   G3 authorization field in the declaration form

Ref: FT-34925, PSD-9768	
Description	The authorization data element (12 12 000 000) was incorrectly appearing, at the 'House/House Items' level for G3 declarations, despite not being part of the G3 data set requirements.
Fix	The form definitions for G3 declarations in TP UI were updated to remove the incorrect authorization field.
Impact	Users working with G3 declarations now see only the relevant and required fields in the interface, resulting in a more accurate and streamlined declaration process.

4.3   H1 declarations with End-user procedure

Ref: FT-34889	
Description	When submitting H1 End-Use declarations with procedure code 8F, users encountered validation errors regardless of whether the supporting document C990 was included or not, preventing successful declaration submission.

Fix	The business rule BR10071_002 that was incorrectly preventing the combination of End-Use authorization and supporting documents has been disabled.
Impact	Users can now successfully submit H1 declarations that include both End-Use procedure code 8F and the necessary supporting documents such as C990, streamlining the declaration process for End-Use goods.

4.4 Incorrect data element in H7 declaration form

Ref: FT-34881	
Description	When creating H7 declarations in TP UI, users would see data element 11 09 002 000 in Group 11, which is not part of the European Union Customs Data Model (EUCDM).
Fix	The system was updated to remove the non-compliant data element 11 09 002 000 from the H7 declaration interface.
Impact	Users now see only the correct and EUCDM-compliant data elements when creating H7 declarations, ensuring proper alignment with EU customs standards.

4.5 Incorrect data element in H7 declaration form

Ref: FT-34880	
Description	When creating H7 declarations in TP UI, users would see data element 11 09 001 000 in Group 11, which is not part of the European Union Customs Data Model (EUCDM).
Fix	The system was updated to remove the non-compliant data element 11 09 001 000 from the H7 declaration interface.
Impact	Users now see only the correct and EUCDM-compliant data elements when creating H7 declarations, ensuring proper alignment with EU customs standards.

4.6 Pre-lodged G4 declarations

Ref: FT-34711	
Description	When a pre-lodged G4 declaration was selected for document control during risk analysis, the system failed to send a CWMCTL notification to the trader about the upcoming control.
Fix	The risk analysis system was updated to correctly handle G4 declarations by returning the proper control type and

	notification parameters, similar to how pre-lodged import declarations are processed.
Impact	Traders now receive proper control notifications when their pre-lodged G4 declarations are selected for document control, improving transparency and allowing them to prepare appropriately for the control process.

4.7 Incorrect include preference data in H5 declarations.

Ref: FT-34416	
Description	The system was incorrectly allowing data element 14 11 000 000 (Duty/Tax/Fee preference) to be included at the goods item level in H5 declarations, despite this element not being permitted according to the customs data model.
Fix	The system was updated to remove the preference field from the goods item level in the H5 declaration interface.
Impact	Users now have a more accurate H5 declaration interface that properly reflects data element requirements, preventing potential confusion and errors during the declaration process.

4.8 Unclear validation errors when submitting O1 declarations

Ref: FT-33783	
Description	When submitting O1 declarations where the declarant was not a private person, users encountered validation errors related to the declarant EORI field, but the system did not clearly indicate that the identification type field was the actual cause of the error.
Fix	The validation system was updated to correctly highlight the identification type field (located below D.E. 13 05 017 000) when it requires input, providing clearer guidance to users.
Impact	Users now receive accurate visual indicators showing exactly which fields need attention when submitting O1 declarations, leading to a more intuitive and efficient declaration process.

4.9 Incorrect data elements in H6 declaration forms.

Ref: FT-33706	
Description	The location of goods data element (16 15 000 000) was incorrectly visible in the TP UI when creating H6 declarations, despite

	this element not being part of the European Union Customs Data Model (EUCDM) for H6 declarations.
Fix	The system was updated to hide the location of goods data group (Group 16) from the H6 declaration interface in TP UI.
Impact	Users now see only the correct and EUCDM-compliant data elements when creating H6 declarations through the UI.

5 Release 6.1.5.1-RC3.1

Environment	Release date
PROD	N/A
TFE02	06-03-2025

5.1   Missing translations for D.E's in Trader Portal UI

Ref: FT-34904	
Description	D.E's 14 07 001 000, 14 08 001 000, 14 10 001 000 and 14 11 001 000 are displayed with English text despite the language being set to Danish
Fix	The underlying issue was fixed.
Impact	The D.E's are now displayed in the language that has been selected

5.2   MSI IM/U is rejected for I1 declarations referenced CO/C

Ref: FT-34385, PSD-9324	
Description	It should be possible to submit an MSI IM/U for a referenced CO/C but in this case it is rejected due to incompatible types.
Fix	The underlying issue was fixed.
Impact	The MSI IM/U is now accepted rather than rejected

5.3   Missing mandatory indicators for several fields in I1 Declaration Trader Portal UI

Ref: FT-33571	
Description	There are several mandatory fields within the I1 declaration which should be marked with indicator to show that they are mandatory, however, this is currently not the case for some of the fields
Fix	The underlying issue was fixed.
Impact	All the mandatory fields / data elements are now marked as mandatory

5.4 Missing mandatory indicators for several fields in H2 Declaration Trader Portal UI

Ref: FT-33534	
Description	There are several mandatory fields within the H2 declaration which should be marked with indicator to show that they are mandatory, however, this is currently not the case for some of the fields
Fix	The underlying issue was fixed.
Impact	All the mandatory fields / data elements are now marked as mandatory

6 Release 6.1.5.1-RC3

Environment	Release date
PROD	N/A
TFE02	06-03-2025

6.1 G5 discharging from a G4G3 with too much weight is not rejected.

Ref: FT-34947	
Description	When trying to send in a G5 that discharges from a G4G3 with more weight than is available on the G4G3 the G5 is not rejected, which it should be.
Fix	The underlying issue was fixed.
Impact	The G5 declaration with too much weight is rejected.

6.2 Delivery terms is missing after submitting a H4 declaration

Ref: FT-34893	
Description	When an uploaded H4 declaration is submitted the delivery terms in 14 01 and the underlying DEs are missing
Fix	The underlying issue was fixed.
Impact	The declaration is submitted successfully, and not rejected due to data in DE 14 01 being deleted.

6.3 Errors in application when submitting an H3 with 8F

Ref: FT-34771, PSD-9644	
Description	When a H3 with 8F application is submitted, and the application has been granted by a customs officer, 2 errors are thrown.
Fix	The underlying issue was fixed.
Impact	The application should be granted after the customs officer has filled out their part of the application. Errors should appear before the EO when submitting.

6.4 DEs are combined on the same line

Ref: FT-34764, PSD-9651	
Description	When making a correction for a G4 DE 12 03 000 000, 12 04 000 000, 12 05 000 000 and 12 12 000 000 are combined on the same line in Group 12.
Fix	The underlying issue was fixed.
Impact	That DE 12 03 000 000, 12 04 000 000, 12 05 000 000 and 12 12 000 000 are located at separate Groups/line.

6.5 Dropdown menu for DE 16 09 000 000 contains wrong information.

Ref: FT-34724	
Description	Dropdown menu for DE 16 09 000 000 contains wrong information and are missing information
Fix	The underlying issue was fixed.
Impact	The dropdown menu contains the right information.

6.6 H6 with invalid Supporting Document

Ref: FT-34722, PSD-9585	
Description	When selecting invalid values for GoodsItem, SupportingDocument and TypeCode a H6 will not upload in TP UI, without a helpful error message.
Fix	The underlying issue was fixed.
Impact	A proper error message is shown.

6.7 Rejection is not received if LRN contains Æ, Ø, Å

Ref: FT-34719	
Description	Rejection message is not recieved by TP if Submitter reference (LRN) contains Æ, Ø or Å.
Fix	The underlying issue was fixed.
Impact	Trader recieves rejection notification

6.8 Discrepancy between messages on TP and DMS Internal (Import and Export)

Ref: FT-34717	
Description	Discrepancy between messages on TP and DMS Internal (Import and Export)
Fix	The underlying issue was fixed.
Impact	There is no discrepancy

6.9 When completing a manual worktask a message is not sent.

Ref: FT-34709	
Description	It's possible to write comments to submitters when completing manual acceptance work tasks, but comments are not sent. Remarks from work tasks are not visible for the Trader if the work task is completed with acceptance.
Fix	The underlying issue was fixed.
Impact	It should not be possible to write a comment to submitter when manual acceptance work task is completed with "Accept", as the comment is not sent to the submitter.

6.10 Mismatch in headline in DMS Online and TP

Ref: FT-34698, PSD-9616	
Description	Headline on a declaration in DMS Online - TP is named in Danish 'Angivelse' it should be 'Hoveddel'.
Fix	The underlying issue was fixed.
Impact	Danish users now experience consistent terminology in TP.

6.11 Domain names in dropdown

Ref: FT-34664, PSD-9616	
Description	Manifest: The DMS "tab" is misleadingly named Manifest in the top blue line to the right. In Danish it should read Midlertidig opbevaring og vareregistrering Export:

	We have noticed that in the top blue line on the right it says EKSPORTER. In Danish it should read EKSPORT
Fix	The underlying issue was fixed.
Impact	That what is written in the blue line and tab matches the texts below. • Midlertidig opbevaring og vareregistrering • Eksport

6.12 No CWMTAX notification is sent to TraderPortal for an I1.

Ref: FT-34646, PSD-9522	
Description	When sending an I1 and KRIA result is returned Green - it is expected that the following messages are received in Trader-Portal • 'CWMTAX' notification is received
Fix	The underlying issue was fixed.
Impact	Following messages are received in TraderPortal • 'CWMTAX' notification is received

6.13 Addition and deductions on Declaration level is removed when submitting

Ref: FT-34638	
Description	Addition and deductions add on Declaration level is removed when submitting the declaration
Fix	The underlying issue was fixed.
Impact	Addition present and added to customs value.

6.14 When an MSI is manually created via TP it stops as it is stuck in validation

Ref: FT-34632, PSD-9509	
Description	When a I1/MSI is manually created via TP it stops as it is stuck in validation.
Fix	The underlying issue was fixed.

| Impact | I1 declaration no longer gets stuck when creating an MSI referencing the I1 manually in TP UI |

6.15 G3 – Manifest, stuck in pending validation

Ref: FT-34627, PSD-9393	
Description	Users submitting G3 declarations via the manifest functionality experienced issues where declarations would become stuck in the "pending validation".
Fix	The underlying issue was fixed.
Impact	Users can now successfully submit G3 manifest declarations without them becoming stuck in validation.

6.16 Representative field incorrectly set as mandatory for G3 declarations.

Ref: FT-34621	
Description	Users were unable to submit G3 declarations without filling in the Representative field (D.E. 13 06), despite this field being defined as conditional rather than mandatory.
Fix	The underlying issue was fixed.
Impact	Representative (D.E. 13 06) should not be mandatory for the G3.

6.17 AcceptanceDateTime disappearing from PreviousDocuments when submitting empty corrections

Ref: FT-34600, PSD-9497	
Description	The correction made via TP to a H1 declaration which does not contain any changes removes AcceptanceDateTime from PreviousDocuments.
Fix	The underlying issue was fixed.
Impact	Users can now submit corrections via Trade Portal without unintentionally losing AcceptanceDateTime data in PreviousDocuments.

6.18 Unauthorized access to Bill of Discharge timer functions.

Ref: FT-34599, PSD-9442	
Description	According to established criteria the CO needs to have a role/right to handle the Bill of Discharge timer, however, currently it is possible to handle, claim, and update the timer without having that role.
Fix	The underlying issue was fixed.
Impact	The Update Timer work task for the Bill of discharge timer is not accessible for the CO without the CustomsPositionOnBOD rights.

6.19 Invalidation of H1 used for disposal of goods for an H2

Ref: FT-34592, PSD-9436	
Description	When an H1 declaration used for disposal of goods for an H2 declaration was invalidated, the goods accounting in the H2 declaration was not properly updated to reflect the cancellation of the disposed amount.
Fix	The underlying issue was fixed.
Impact	The amount disposed of by the H1 declaration in goods accounting in the H2 is deleted/canceled.

6.20 H6 form wrongly refers to subelements of 14 15 from H7

Ref: FT-34585, PSD-9431	
Description	The H6 and H7 forms use the same elements in group 14 13 (H6) and group 14 15 (H7), even though they should be separate elements (Value and Currency exists as seperate data elements).
Fix	The underlying issue was fixed.
Impact	Users now see correctly labeled form fields when working with H6 declarations, with proper differentiation between H6 and H7 forms, reducing confusion and potential data entry errors.

6.21 INV4C B2B Requires request headers for Code and Reason elements

Ref: FT-34565, PSD-9503	
Description	The B2B API for INV4C requests was requiring the inclusion of "changeReasonText" and "changeReasonCode" headers, unlike standard invalidation requests where these headers could be omitted if values were provided in the XML body.
Fix	The underlying issue was fixed.
Impact	B2B integrations can now use consistent request patterns across all invalidation types.

6.22 Confusing error message when submitting a second invalidation request

Ref: FT – 34562, PSD - 9499	
Description	When attempting to submit a second invalidation request for a declaration that already had a pending invalidation, the system would return error code OE0040 with an incorrectly referenced both amendment and invalidation processes: "Already an amendment for this LRN found, it cannot be amended twice" and "Already a pending Invalidation for this LRN found, it cannot be invalidated twice".
Fix	The error message for OE0040 was updated to provide clear and specific information related only to the actual operation being performed, removing references to unrelated processes when responding to duplicate invalidation requests.
Impact	Users now receive clear and accurate error messages when attempting to submit a second invalidation request.

6.23 Inconsistent identification of additional messages in CWMREJ notifications

Ref: FT – 34560, PSD - 9496	
Description	When an invalid additional message (such as an Invalidation or Correction) was rejected, the system generated a CWMREJ notification that incorrectly labeled the additional message identifier as "MRN" instead of "URN", creating inconsistency with other notification types (CWMRCV and CWMREQ) that correctly used the "URN" tag.

Fix	The system was updated to consistently use the "URN" tag when referencing additional message identifiers in all notification types, including CWMREJ notifications.
Impact	All notification types (CWMREJ, CWMRCV, and CWMREQ) now consistently identify additional messages with the correct "URN" tag.

6.24 Bill of Discharge missing from H4 declarations with 8f application

Ref: FT – 34559, PSD - 9414	
Description	When processing an H4 declaration with an 8f application, the Bill of Discharge information entered during the "Customs Position on Application" work task was not being saved to the declaration, causing the information to disappear from Trader Portal interfaces after completing the task.
Fix	The system was updated to properly save and display Bill of Discharge information, during the application approval process.
Impact	Bill of Discharge information is now correctly saved and displayed in Trader Portal interfaces after completing the Customs Position on Application work task.

6.25 H1 declarations with valid REX numbers incorrectly rejected during validation

Ref: FT – 34542	
Description	When submitting H1 declarations with Registered Exporter (REX) numbers in the supporting document section, the system was incorrectly rejecting them with error DK2032, stating "the REX number does not exist or is not valid" despite the numbers being valid in the DK-CRS database.
Fix	The integration between systems was updated to properly validate REX numbers, ensuring that valid REX identifiers are correctly recognized and accepted.
Impact	Users can now successfully submit H1 declarations with valid REX numbers.

6.26 Incorrect code list displayed for previous document types in G3G4 declarations

Ref: FT – 34533, PSD - 9405	

Description	When working with G3G4 declarations in the Trader Portal and attempting to add a previous document at the master consignment item level, the system was incorrectly displaying the supporting documents code list (CL 10275) instead of the previous document type code list (CL 10273).
Fix	The system configuration was updated to correctly link the appropriate code list (CL 10273) to data element 12 01 002 000 (Previous Document Type) at the master consignment item level.
Impact	Users can now select from the correct list of previous document types when completing G3G4 declarations at the master consignment item level.

6.27 Unable to remove identification type in Group 13 fields within Trader Portal

Ref: FT – 34532, PSD - 9514	
Description	When users attempted to remove data from field Identification type in an H7 declaration through the Trader Portal, the system would retain the original value.
Fix	The system was updated to properly process and save field deletions in Group 13 data elements, particularly for the Identification type field.
Impact	Users can now successfully modify or remove identification type information in Group 13 fields within the Trader Portal.

6.28 I1 declarations failing with repeated LRN validation errors during arrival notification

Ref: FT - 34531	
Description	When creating an arrival notification (IEA62) for an I1 declaration, the system was generating multiple identical error messages regarding data element 12 09 001 000 (LRN), and incorrectly setting status code 9 in the IEI85A Import Declaration Update Response.
Fix	The validation process for arrival notifications was corrected to properly handle LRN references and to generate appropriate status codes in the IEI85A Import Declaration Update Response.
Impact	Users can now successfully submit arrival notifications for I1 declarations without encountering repeated validation errors, and the system correctly updates the declaration status in the manifest, ensuring smooth processing of import declarations.

6.29 Inconsistent validation of Goods Location information in G-type declarations

Ref: FT – 34525, PSD - 9402	
Description	The system had issues with validating Goods Location information in G declarations, including accepting invalid location type codes, rejecting declarations with valid coordinates, and allowing submissions with multiple conflicting location identifiers.
Fix	Comprehensive validation rules were implemented for Goods Location information in G-type declarations, ensuring proper validation of location type codes, coordinates format, and preventing the use of multiple conflicting location identifiers in the same declaration.
Impact	The system now properly validates Goods Location information according to business rules, ensuring that only valid location information is accepted and providing appropriate rejection messages when invalid data is submitted, improving data quality.

6.30 H1 declarations with conflict statuses when presenting goods.

Ref: FT – 34516, PSD – 9398	
Description	When submitting a pre-lodged H1 declaration and presenting the goods via a G3 before preliminary risk assessment results were received, the H1 declaration could end up in a conflicted state of being simultaneously "pending manual acceptance" and "under manual release" once the risk assessment response was received.
Fix	The system was updated to properly handle the sequence of events when goods are presented, ensuring that declarations progress through their workflow states in the correct order without conflicting statuses.
Impact	The experience a more consistent and predictable declaration workflow when presenting goods, with declarations properly maintaining a single, clear status at all times.

6.31 Declaration in status conflict when presenting rejected goods.

Ref: FT – 34561, PSD - 9425	
Description	When submitting a pre-lodged H1 declaration and presenting the goods via a G3 before preliminary risk assessment results were received, the H1 declaration could end up in a conflicted state of being simultaneously "rejected" and "under manual release" once the risk assessment response was received.
Fix	The system was updated to properly handle the sequence of events when goods are presented before risk assessment is completed, ensuring that declarations maintain a single, consistent status even when rejection occurs during the process.
Impact	Users now experience a more predictable declaration workflow when presenting goods before risk assessment is complete, with rejected declarations properly maintaining their rejected status without progressing to conflicting states like "under manual release."

6.32 G3 declarations stuck in "Submitted" status in Trader Portal

Ref: FT – 34515, PSD - 9393	
Description	When submitting G3 declarations through the B2B interface, they would remain stuck in "Submitted" status in the Trader Portal.
Fix	The system was updated to properly handle party identification validation during G3 declaration processing, resolving a null pointer exception that was causing declarations to become stuck in the validation workflow.
Impact	G3 declarations submitted through the B2B interface now progress properly through the validation process and appear in both the Trader Portal.

6.33 Procedure codes disappearing in I2 Presentation Notifications causing validation failures

Ref: FT – 34511, PSD - 9515	
Description	When creating an I2 Presentation Notification from the Trader Portal after submitting an H1 declaration, the procedure codes were being cleared from the goods item entries,

	and when re-entered manually, the system would incorrectly fail with a "DutyTaxFree value is required" validation error.
Fix	The system was updated to properly retain procedure codes when generating I2 Presentation Notifications and to correctly handle the validation of duty/tax information based on these codes.
Impact	Traders can now successfully submit I2 Presentation Notifications without having to manually re-enter procedure codes.

6.34 H6 declarations with multiple goods items stuck in "Received - Pending Validation" state

Ref: FT – 34510	
Description	When submitting an H6 declaration with ten goods items, the declaration would become stuck in the "Received - Pending Validation" state without displaying any error messages, preventing users from proceeding with the declaration process.
Fix	The system was updated to properly handle country field population in complex H6 declarations with multiple goods items, resolving an issue that was causing declarations to fail.
Impact	Users can now successfully submit and process H6 declarations with multiple goods items.

6.35 G3 declarations accepting invalid values for Type of Location field.

Ref: FT – 34500, PSD - 9402	
Description	The system was accepting G3 declarations with invalid values in the Type of Location field, despite specifications requiring format 'a1' with only valid values being 'A', 'B', 'C', or 'D'.
Fix	Validation rules were implemented to properly check the Type of Location field in G3 declarations, ensuring only the allowed single-character values ('A', 'B', 'C', or 'D') are accepted.
Impact	The system now correctly validates the Type of Location field in G3 declarations according to specifications.

6.36 H5 declarations with PoUS references at header level were automatically released without required manual review

Ref: FT – 34290	

Description	When users submitted H5 declarations with Proof of Union Status (PoUS) references in data element 12.03 at the header level, the system was incorrectly processing them for automatic release instead of sending them for manual handling.
Fix	The validation system was updated to properly identify and route H5 declarations with PoUS references at header level for manual handling.
Impact	All H5 declarations with PoUS references now correctly trigger manual handling workflows.

6.37 Users unable to enter weight information when requesting disposal of G4 declarations

Ref: FT – 34267, PSD - 9177	
Description	When attempting to request disposal of a G4 declaration, users were unable to add weight information in the Master Consignment section, despite being able to select a measurement unit.
Fix	The system was updated to properly display and accept weight field inputs during the disposal request process for G4 declarations.
Impact	Users can now successfully complete disposal requests for G4 declarations by entering required weight information, ensuring compliance with declaration requirements.

7 Release 6.1.5.1-RC2

Environment	Release date
PROD	N/A
TFE02	06-03-2025

7.1   Incorrect timer setting for G5 declarations for specified dates.

Ref: FT-34657	
Description	When submitting a G5 declaration with an additional information code DTIME and a specific date (e.g., 2025-02-01), the system was incorrectly setting the timer due date to 1:00 AM on that date (e.g., 2025-02-01 01:00:00) instead of the end of the day.
Fix	The timer functionality was updated to correctly set the due date to the end of the specified date, ensuring proper expiration timing.
Impact	Users can now rely on G5 declaration timers to expire at the appropriate time (end of the specified day), allowing for proper planning and management of time-sensitive customs processes.

7.2   Incorrect format dates on H6 IMZ declarations

Ref: FT-34648	
Description	When submitting an H6 IMZ declaration with additional information code "H6EDT" in field 12 02 008, the system was not properly validating the date format in the corresponding additional information text field (12 02 009), allowing incorrectly formatted dates to be accepted.
Fix	The validation system was updated to properly check that when the additional information code is "H6EDT", the date in field 12 02 009 must follow the format YYYYMMDD.
Impact	Users now receive appropriate validation errors when submitting H6 IMZ declarations with incorrectly formatted dates, ensuring data integrity and preventing processing issues related to invalid date formats.

7.3   Incorrect rejections of declarations with statistical values.

Ref: FT-34644	

Description	H1, H2, and H4 declarations with statistical values exceeding 115,000 DKK (approximately 15,000 EUR) were being incorrectly rejected by the system, despite this limitation being applicable only to H5 declarations.
Fix	The validation rule BR10002_006 was modified to correctly apply the statistical value limitation only to H5 declarations, as required by regulations.
Impact	Users can now successfully submit H1, H2, and H4 declarations with statistical values over 115,000 DKK without incorrect rejections, allowing for proper processing of higher-value imports through these declaration types.

7.4 UI breakage when accessing document on TP

Ref: FT-34622, PSD-9458	
Description	When users clicked on the three-dots menu to select an attached document in the Declaration Overview section of Trader Portal, the user interface would break, preventing them from viewing the entire "Upload" button and properly interacting with document options.
Fix	The user interface rendering issue in the document selection menu was resolved, ensuring proper display of all document action buttons.
Impact	Users can now consistently access and interact with document options in the Trader Portal without experiencing UI breakage, allowing for smooth document management across all declaration types.

7.5 Technical error during CERTEX certificate validation.

Ref: FT-34588	
Description	When declarations with CERTEX certificate information were submitted, the system was creating "Handle Technical Error" work tasks during authorization validation without providing clear error messages or reasons for the validation failure.
Fix	The configuration issue in the CCN2 adapter was resolved by updating the namespace for the callback method, ensuring proper communication between the CERTEX emulator and the system.
Impact	Users now receive proper error information when CERTEX validation encounters issues, allowing for appropriate

	troubleshooting and resolution of certificate-related problems during the declaration process.

7.6 Incorrect rejection of Transit declarations.

Ref: FT-34567	
Description	Transit declarations containing valid C521 authorization codes were being rejected by the system with error code 12 (CL235), despite the authorization being properly registered and valid in DK-CRS.
Fix	The system's reference data retrieval process was corrected to properly import and update the codelist containing C521 authorization codes from CSRD2, ensuring valid authorizations are recognized during validation.
Impact	Users can now successfully submit Transit declarations with valid C521 authorizations without experiencing incorrect rejections, streamlining the declaration process for authorized Transit operators.

7.7 Rejections when procedure code is valid for H5 declaration.

Ref: FT-34558	
Description	When submitting H5 declarations with the procedure code combination of Requested Procedure (11 09 001 000) = 61, Previous Procedure (11 09 002 000) = 21, and Additional Procedure (11 10 001 000) = B01, users received rejection errors stating "The combination of Requested procedure, Previous Procedure, and Additional procedure is not allowed."
Fix	The system's reference data was updated to include the missing procedure code combination '6121B01' in codelist 50110, allowing the valid procedure combination to be accepted.
Impact	Users can now successfully submit H5 declarations with the specified procedure code combination, enabling proper processing of goods under this particular customs scenario.

7.8 Rejection when using valid additional procedure code for H5 declaration.

Ref: FT-34557	
Description	When submitting H5 declarations with the additional procedure code B01 as part of a valid procedure combination (Requested Procedure 61, Previous Procedure 10, Additional Procedure B01), users received rejection errors stating "value

	'B01' at 'GoodsItem.specialProcedures.code' does not exist in '11040'".
Fix	The system's reference data was updated to include the missing procedure code combination '6121B01' in codelist 50110, allowing the valid procedure combination to be accepted.
Impact	Users can now successfully submit H5 declarations with the specified additional procedure code B01 in combination with requested procedure 61 and previous procedure 10, enabling proper processing of goods under this particular customs scenario.

7.9   Inconsistent display of goods item status after partial release.

Ref: FT-34545	
Description	After performing a partial release where some goods items were released and others detained, the TP UI failed to display the correct status of goods items.
Fix	An updated to correctly display the status of goods items after partial release, ensuring consistency with the TP UI and KRIA systems.
Impact	Customs officers and users can now see accurate and consistent goods item status information across all interfaces after partial release operations, with released items clearly marked as "Goods item released" and detained items marked as "deleted" in TP.

7.10 Inconsistent display of goods item after partial release.

Ref: FT-34544	
Description	When performing a partial release in KRIA where some goods items were released and others withheld awaiting documentation from another authority, the status of goods items was only visible in the TP UI.
Fix	An updated to correctly display the status of goods items during partial release, ensuring consistency with the TP UI.
Impact	Customs officers and users can now see accurate and consistent goods item status information across all interfaces during partial release operations, with released items clearly marked as "OK to release" and withheld items marked as "partial release started" in TP.

7.11 Submit I2EIDR declarations without goods location information.

Ref: FT-34527, PSD-9403	
Description	When submitting I2EIDR declarations with goods location elements, the system was not correctly validating the sub-elements according to the specified identification code, allowing declarations with inconsistent or incomplete location information to be accepted.
Fix	The validation system was updated to properly enforce the relationship between the goods location identification code and its required sub-elements, ensuring that only the appropriate elements for each identification code are accepted.
Impact	Users now receive appropriate validation feedback when submitting I2EIDR declarations with goods location information, ensuring data consistency and preventing potential processing issues related to incomplete or contradictory location data.

7.12 Submit G3 declarations without previous document information.

Ref: FT-34520, PSD-9410	
Description	When submitting G3 declarations, the system was not validating whether the previous document type was declared or whether it was a valid document type, despite this being a mandatory field according to requirements.
Fix	The validation system was updated to properly enforce the requirement for a valid previous document type when submitting G3 declarations.
Impact	Users now receive appropriate validation errors when submitting G3 declarations without the required previous document type information, ensuring compliance with declaration requirements and preventing potential processing issues.

7.13 Inconsistent input behaviour when entering customs office information.

Ref: FT-34507, PSD-9440	
Description	When creating G3 presentations in the Trader Portal UI, the Customs office reference number field (16 15 047 001) was implemented as a regular text input rather than an autocomplete field, contrary to the user interface design specifications.
Fix	The Customs office reference number field was updated to function as an autocomplete field, providing users with suggestions as they type.

Impact	Users now experience a more consistent and user-friendly interface when entering customs office information, with autocomplete functionality helping to prevent errors and improve data entry efficiency in G3 declarations.

7.14 Danish translate UI element for DMS Import.

Ref: FT-34503, PSD-9423	
Description	In the Overview tab of DMS Import, the label "Task (DK)" was not properly translated to Danish, appearing in English instead of the expected Danish translation "Opgaver".
Fix	The translation for the task section header was updated to correctly display "Opgaver" in the Danish version of the interface.
Impact	Danish users now experience a fully translated and consistent interface when viewing the Overview tab in DMS Import, improving user experience and comprehension.

7.15 Danish translate UI element for DMS Online.

Ref: FT-34501	
Description	When viewing import declarations in DMS Online/TP, the title for Group 14 (Calculation Information) was not properly translated to Danish, while the same element was correctly translated in the DMS Import interface.
Fix	The translation for the task section header was updated to correctly display "Opgaver" in the Danish version of the interface. The translation for Group 14 was updated to consistently display "Beregningsoplysninger" in the Danish version of the DMS Online/TP interface.
Impact	Danish users now experience a fully translated and consistent interface when viewing calculation information in import declarations across both DMS Online/TP and DMS Import interfaces.

7.16 Danish translation for TARIC code identifier for DMS Online.

Ref: FT-34499	
Description	When viewing import declarations in DMS Online, the field label "(09 058) [6/15] TARIC code Identifier (DK)" in Group 16 (Location, Countries, and Origin) was not properly translated to Danish.

Fix	The translation for the TARIC code identifier field was updated to correctly display "Taric kode (18 09 058 000)" in the Danish version of the interface.
Impact	Danish users now experience a fully translated interface when viewing TARIC code information in import declarations, improving user experience and comprehension.

7.17 Authorization terminology for DMS Online.

Ref: FT-34498	
Description	When creating I2EIDR declarations in DMS Online/TP, the dropdown menu for authorization codes (based on codelist CL10274) used inconsistent terminology, displaying "Tilladelse" (permission) instead of the correct term "Bevilling" (authorization) and containing text that did not match the official TARIC descriptions.
Fix	The Danish translations in codelist CL10274 were updated to match the official TARIC terminology, replacing "Tilladelse" with "Bevilling" and aligning the descriptions with the official TARIC texts.
Impact	Danish users now see consistent and officially correct terminology when working with authorization codes in I2EIDR declarations, improving clarity and reducing potential confusion about authorization types.

7.18 Incorrect mapping of customs office information in G3 declaration.

Ref: FT-34497, PSD-9390	
Description	When submitting G3 declarations via Trader Portal UI, the presentation customs office (data element 17 09 000 000) was incorrectly mapped to the supervising office field in the resulting XML, causing declarations to be rejected due to violation of business rule BR255_040.
Fix	The system was updated to correctly map the presentation customs office data to the appropriate field in the XML structure for G3 declarations.
Impact	Users can now successfully submit G3 declarations through the Trader Portal UI with proper customs office information, allowing for correct processing of these declarations without rejection errors related to BR255_040.

7.19 Danish translation for country information on DMS Online.

Ref: FT-34494	

Description	When viewing import declarations in DMS Online/TP, the field label "country Of Dispatch Code (DK)" in Group 16 (Location, Countries, and Origin) was not properly translated to Danish.
Fix	The translation for the country of dispatch field was updated to correctly display "Afsendelsesland (16 06 000 000)" in the Danish version of the interface.
Impact	Danish users now experience a fully translated interface when viewing country information in import declarations, improving user experience and comprehension across both declaration and goods item levels.

7.20 Persistent timers for cleared Temporary Storage declarations.

Ref: FT-34486, PSD-9346	
Description	When a Temporary Storage declaration was cleared through disposal of goods, the "PRM - Time Window for Temporary Storage" timer remained active in the system, despite the declaration proceeding to clearance status.
Fix	The system was updated to properly deactivate the Temporary Storage timer when a declaration is cleared through disposal of goods.
Impact	Users now see accurate timer status information, with Temporary Storage timers being automatically deactivated when declarations are cleared, preventing confusion and ensuring proper system cleanup of timer resources.

7.21 Incorrect enable Bill of Discharge for H3 declarations.

Ref: FT-34426, PSD-9332	
Description	The system was incorrectly allowing users to enable the Bill of Discharge option when processing H3 declarations with procedure code 8f, resulting in unnecessary CWMBOD notifications being sent to traders and inappropriate timer activations, despite Bill of Discharge not being applicable to H3 declarations.
Fix	The system was updated to prevent the enabling of Bill of Discharge functionality for H3 declarations, ensuring that the Bill of Discharge checkbox cannot be selected when processing these declarations.
Impact	Users now experience appropriate behavior when processing H3 declarations with procedure code 8f, without the possibility of inadvertently triggering irrelevant Bill of Discharge

	notifications or timers, resulting in a more accurate customs process.

7.22 Amend quota information in declarations.

Ref: FT-34419, PSD-9315	
Description	When attempting to amend a declaration to change the Quota Order ID (99 01 001 000) from one value to another (e.g., from 000006 to 000009), users found that the current quota value was invisible in the amendment interface and the system did not process the requested change.
Fix	The system was updated to properly display and process quota information during declaration amendments, ensuring that the current quota value is visible and can be modified.
Impact	Users can now successfully view and modify quota information when submitting amendment requests, allowing for proper adjustments to quota-related data in declarations after initial submission.

7.23 Error when presenting H3 declarations in Manifest.

Ref: FT-34418, PSD-9314	
Description	When attempting to create a presentation for a pre-lodged H3 declaration in Manifest, the process would fail with error status 9 and message "DMS-Import reference is not known or in wrong status". This occurred because DMS was sending status code 0 in the IEI79A response instead of the expected status code 3.
Fix	The system was updated to correctly handle the status codes in the communication between DMS and Manifest when processing H3 declaration presentations.
Impact	Users can now successfully present pre-lodged H3 declarations through Manifest without encountering status errors, allowing for proper processing of these declarations in the customs workflow.

7.24 G4G3 declaration didn't set task to complete.

Ref: FT-34415, PSD-9308	
Description	After acceptance of a G4G3 declaration and completion of the Manual Calculation of Remaining Days work task, the system was not setting the task to complete.

Fix	The system was updated to properly trigger the complete task for the G4G3 declaration.
Impact	G4G3 declarations now correctly proceed through the work-flow.

7.25 Incorrect data elements in the Additional references section.

Ref: FT-34405, PSD-9784	
Description	When working with declarations in the Trader Portal UI, users found that the Additional References section (12 04) contained invalid data elements that are not part of the European Union Customs Data Model (EUCDM), specifically elements 12 03 010, 12 03 011, 12 03 013, and 12 12 080.
Fix	The Trader Portal UI was updated to remove the invalid data elements from the Additional References section, ensuring alignment with the EUCDM requirements.
Impact	Users now see only the correct and EUCDM-compliant data elements when working with Additional References in declarations, improving data accuracy and reducing potential confusion during the declaration process.

7.26 Incorrect auto-population in G3 declarations.

Ref: FT-34402, PSD-9370	
Description	When creating G3 declarations in the Trader Portal UI, entering data in either the representative party identification (D. E. 13 06 017 000) field or the person presenting goods identifier field (D. E. 13 11 017 000) would automatically populate the other field with the same value, despite these being separate and distinct data elements.
Fix	The system was updated to properly separate the representative party identification and person presenting goods identifier fields, ensuring that data entered in one field does not automatically populate the other.
Impact	Users can now independently enter different values for representative party identification and person presenting goods identifier when creating G3 declarations, allowing for accurate representation of these distinct roles in the customs process.

7.27 Amendment information for Consignor Name.

Ref: FT-34399, PSD-9283	
Description	When traders requested corrections to the Consignor Name (D.E. 13 02 016 000) in the TP UI, the amendment details were not properly displayed in the resulting customs officer work task or in the Additional Messages section, despite the changes being correctly applied to the declaration.
Fix	The system was updated to properly include Consignor Name amendment details in the work task and additional messages views, ensuring visibility of these changes in the amendment approval process.
Impact	Customs officers can now see complete and accurate information about Consignor Name amendment requests in work tasks, allowing for proper review and approval of these changes while maintaining a clear audit trail of declaration modifications.

7.28 Incorrect control state display after completed for declaration.

Ref: FT-34389, PSD-9224	
Description	When a declaration underwent risk assessment that triggered a control, the control state would be set to "In Progress" but would not update to reflect the completed status even after the control task was closed and the declaration was fully processed according to the control result.
Fix	The system was updated to properly update the control state when control results are received and processed, ensuring that the displayed state accurately reflects the current status of the declaration.
Impact	Users now see accurate control state information throughout the declaration lifecycle, with the state properly transitioning from "In Progress" to the appropriate final state once controls are completed, providing better visibility into the declaration's processing status.

7.29 Rejection error when presenting H1 with G3 declarations

Ref: FT-34375	
Description	When attempting to present an H1 declaration using a G3 presentation notification, users encountered rejection errors citing violation of business rule BR255_040 (requiring a

	presentation customs office), even when the appropriate office information was provided.
Fix	The system was updated to correctly map and process the presentation customs office information in G3 declarations, ensuring proper association with the related H1 declaration during the presentation process.
Impact	Users can now successfully present H1 declarations using G3 presentation notifications without encountering incorrect rejection errors, allowing for smooth processing of import declarations through the customs workflow.

7.30 Missing transport equipment information in trader portal.

Ref: FT-34362, PSD-9250	
Description	When submitting G4 or G4G3 declarations with transport equipment information at the Master Consignment level, this information was missing in the Trader Portal UI due to incorrect mapping.
Fix	The system was updated to properly map and display transport equipment information (19 07) in the Trader Portal UI for G4 and G4G3 declarations.
Impact	Users now see consistent transport equipment information across Trader Portal for G4 and G4G3 declarations, ensuring complete visibility of all declaration data regardless of which interface is used.

7.31 Missing correction request for G4G3 declaration

Ref: FT-34360, PSD-9241	
Description	When submitting a request for correction to update the Consignor Name (D.E. 13 02 016 000) in a G4G3 declaration through the Manifest UI, the request was not appearing in the "Request for Correction" overview, making it impossible to track or process the change.
Fix	The system was updated to properly record and display correction requests for Consignor Name in G4G3 declarations in the "Request for Correction" overview.
Impact	Users can now successfully submit, track, and process requests for correction to Consignor Name information in G4G3 declarations, with all requests properly appearing in the overview interface for processing.

7.32 Incorrect cash payment tasks for H1 declarations with valid guarantees.

Ref: FT-34357	
Description	All H1 declarations were generating cash payment work tasks despite importers and declarants having valid tax collateral (skatssikkerhedsstillelse) for existing customs debts, causing unnecessary workflow interruptions.
Fix	The system was updated to properly recognize and respect existing guarantees, preventing the creation of unnecessary cash payment work tasks when valid guarantees are in place.
Impact	Users with valid guarantees now experience a smoother declaration process without interruptions from unnecessary cash payment tasks, allowing for more efficient processing of H1 declarations with guaranteed payment arrangements.

7.33 Danish translation for transport identity field.

Ref: FT-34344	
Description	In the Danish version of the Trader Portal UI, data element 19 06 061 (identity of means of transport) was incorrectly translated as "method of transport" instead of the correct term "Type af transport-ID."
Fix	The Danish translation for data element 19 06 061 was updated to correctly display "Type af transport-ID (19 06 061 000)" in both the Trader Portal and CWM Manifest interfaces.
Impact	Danish users now see consistent and accurate terminology for the transport identity field across all interfaces, improving clarity and reducing potential confusion when working with G4, G4G3, and G5 declarations.

7.34 Incorrect control state display after partial release.

Ref: FT-34338, PSD-9208	
Description	When performing a partial release and reporting all control results, the Control State remained stuck as "In Progress" instead of updating to "Finalized".
Fix	The system was updated to properly update the Control State to "Finalized" when all control tasks are closed and goods items are released after a partial release operation.
Impact	Users now see accurate Control State information that properly reflects the completed status of control operations

	following partial release, providing better visibility into the current processing status of declarations.

7.35 Lost amounts when submitting declarations.

Ref: FT-34325, PSD-9217	
Description	When creating H1 declarations in the Trader Portal UI, manually added amounts in the "Tillæg og fradrag" field (14 04 000 000 - Additions and Deductions) were removed upon submission of the declaration, resulting in loss of important valuation data.
Fix	The system was updated to properly preserve and process manually entered adjustment amounts when submitting declarations through the Trader Portal UI.
Impact	Users can now successfully include additions and deductions to the customs value when submitting declarations, with these amounts being properly retained throughout the submission process and correctly displayed in the final declaration.

7.36 Incorrect validation of delivery terms information.

Ref: FT-34318	
Description	When submitting declarations with delivery terms information, the system was incorrectly requiring both UN/LOCODE and country/location information.
Fix	The validation system was updated to correctly implement the EUCDM rules for delivery terms, allowing declarations with either a valid UN/LOCODE or country and location information, but not requiring both.
Impact	Users can now submit declarations with delivery terms information that follows the EUCDM guidelines, providing either UN/LOCODE or country and location details as appropriate, without encountering incorrect validation errors.

7.37 G3 declaration with invalid previous document references.

Ref: FT- 34272, PSD-9236	
Description	Incorrectly accepting G3 presentation notifications that contained invalid previous document references.
Fix	The validation system was updated to properly check the validity of previous document references in G3 presentations,

	ensuring that references to inappropriate document types are rejected.
Impact	Users now receive appropriate validation errors when attempting to submit G3 presentations with invalid document references.

7.38 Missing field labels in G3 declaration.

Ref: FT-34271, PSD-9230	
Description	When creating G3 presentation notifications in the Trader Portal UI, some data fields in Group 13 were missing their titles/labels, making it difficult for users to identify what information should be entered.
Fix	The user interface was updated to properly display titles and labels for all data fields in G3 declaration forms.
Impact	Users now see clear and consistent labels for all data fields when creating G3 presentation notifications in the Trader Portal, improving usability and reducing potential confusion during the data entry process.

7.39 Could not enter weight when disposing of G4 declaration.

Ref: FT-34267, PSD-9177	
Description	When requesting to dispose of a G4 declaration, users were unable to add weight information in the disposal request form, as the system only allowed them to select a measurement unit without providing a field to enter the actual weight value.
Fix	The disposal request form for G4 declarations was updated to include the necessary field for entering weight values, while maintaining the existing ability to select the measurement unit.
Impact	Users can now successfully complete disposal requests for G4 declarations by entering both the weight value and measurement unit, enabling proper tracking and accounting of disposed goods in the system.

7.40 Update error messages when submitting H1 declaration.

Ref: FT-34211, PSD-9103	
Description	When submitting H1 declarations with certain data issues, particularly related to entries in Goods Item 1 - DE 14 03 that

	contained only a sequence number without other required information, users received generic error messages with no indication of what fields needed correction.
Fix	The validation system was updated to properly handle cases where data elements contain entries with only sequence numbers, now providing specific error messages that indicate which fields need to be corrected.
Impact	Users now receive clear and informative error messages when submitting H1 declarations with data issues.

7.41 Incorrect rejection of amendment request.

Ref: FT-34201, PSD-9226	
Description	When submitting amendment requests to change permitted data elements like gross mass in an H1 declaration, the system was incorrectly rejecting these requests, despite these changes being allowed according to requirements.
Fix	The validation system was updated to correctly process amendment requests for permitted data elements, including gross mass, ensuring that only truly non-amendable elements trigger rejection errors.
Impact	Users can now successfully submit amendments to change permitted data elements in H1 declarations, with the system properly creating work tasks for handling these amendment requests rather than incorrectly rejecting them.

7.42 Incorrect rejection of H3 IMZ declaration with valid guarantees.

Ref: FT-34194	
Description	When submitting H3 IMZ declarations with Guarantee Type, the system was incorrectly rejecting these declarations with error DK2044, claiming the declarant did not have a valid guarantee authorization.
Fix	The validation system was updated to correctly check for comprehensive guarantee authorizations by validating the qualification reference number.
Impact	Users can now successfully submit H3 IMZ declarations with comprehensive guarantees when they have valid DKCGU authorizations in DK-CRS, without encountering incorrect rejection errors related to guarantee validation.

7.43 Payment tasks for H3 declarations.

Ref: FT-34192	
Description	When submitting H3 declarations with Guarantee Type I, the system was incorrectly creating manual cash payment tasks of 10 DKK, despite this not being required for declarations with this guarantee type.
Fix	The system was updated to properly recognize when a declaration uses Guarantee Type I and to correctly bypass the creation of manual payment tasks in these cases.
Impact	Users submitting H3 declarations with Guarantee Type I now experience a streamlined process with automatic release, without being interrupted by unnecessary manual payment tasks, improving efficiency and reducing administrative overhead.

7.44 Guarantee amount field in H1 declaration.

Ref: FT-34189, PSD-9098	
Description	The "Amount to be covered" field (99 03 071 000) in the guarantee section had several issues: the data element number was missing, the description text was truncated, and the field used a number picker that allowed negative values instead of the required numeric format.
Fix	The guarantee amount field was updated to correctly display the complete field reference number, show the full description text, and implement proper numerical input that follows the EUCDM format requirements without allowing negative values.
Impact	Users now experience a more consistent and standards-compliant interface when entering guarantee amount information in H1 declarations, with clear field identification, complete descriptions, and proper validation of numerical input.

7.45 Document line item number not displayed during corrections

Ref: FT-34169, PSD-9079	
Description	When users requested corrections to declarations, the Document line item number (12 03 013 000) data that was previously entered was not being displayed in the correction form.
Fix	The system was updated to properly display the Document line item number data when viewing or correcting declarations.

Impact	Users can now see previously entered Document line item number data when making corrections to declarations, ensuring continuity and accuracy in document references throughout the correction process.

7.46 Amendments to Goods Registration Entries could not be processed

Ref: FT- 34114	
Description	Users were unable to submit amendments to Goods Registration Entries (GREs) as the system was incorrectly rejecting them due to business rule BR168_003, even when the amendments were valid.
Fix	The system was updated to correctly configure business rule BR_VALI_10015_42 to allow valid amendments to Goods Registration Entries.
Impact	Users can now successfully submit amendments to Goods Registration Entries, such as changes to gross mass values, enabling proper correction of information after initial submission.

7.47 Customs office field lacked autocomplete functionality

Ref: FT- 34025, PSD-9086	
Description	The Customs office field (16 15 047 000) in the Trader Portal was implemented as a free-text field instead of providing autocomplete functionality, making it difficult for users to select valid office codes.
Fix	The system was updated to implement autocomplete functionality for the Customs office field, allowing users to select from a dropdown list of valid options.
Impact	Users can now more efficiently enter customs office information with reduced errors by selecting from a filtered list of valid options as they type, improving data entry speed and accuracy.

7.48 H1 Invalidation and remission requests incorrectly rejected

Ref: FT- 33935	
Description	When submitting a H1 invalidation and remission (4C) request, users received validation errors citing business rule BR_ADDM_0206_010.
Fix	The underlying issue was fixed.

Impact	Users can now successfully submit invalidation and remission requests without encountering misleading validation errors, streamlining the process for requesting duty refunds and declaration invalidations.

7.49 Manual release task not created for diplomatic goods

Ref: FT- 33915	
Description	The system was not generating the required "Manual Release" task for declarations with diplomatic goods (procedure code 40 with additional code 800), preventing proper customs processing of these special shipments.
Fix	The underlying issue was fixed.
Impact	Declarations containing diplomatic goods now correctly generate manual release tasks.

7.50 H4 pre-lodged declarations with valid warnings incorrectly rejected

Ref: FT- 33867	
Description	The system was incorrectly treating non-rejecting warnings on H4 pre-lodged declarations (such as "Bill of discharge is required") as rejecting errors, preventing Manifest from properly processing arrival declarations.
Fix	The system was updated to correctly distinguish between rejecting and non-rejecting warnings, particularly for warning code DK_INT_0332, ensuring that declarations with only non-rejecting warnings can proceed through arrival processing.
Impact	Declarations with non-rejecting warnings can now be properly processed through the Manifest system for arrival, eliminating unnecessary rejections and streamlining the goods arrival process.

7.51 Declaration rejections lacked clear error messages

Ref: FT- 33754, PSD-8803	
Description	When I1 declarations were rejected, the system was not providing specific error codes or reasons for the rejection, making it difficult for users to understand and fix the issues.
Fix	The system was updated to include clear error codes and descriptions in rejection messages, both in the interface and in CWMREJ notifications.

Impact	Users now receive detailed information about why their declarations are rejected, allowing them to quickly identify and correct issues without having to contact support for clarification.

7.52 Duplicate field in 8F applications caused decision errors

Ref: FT- 32687	
Description	When attempting to grant 8F applications in declarations, the system was displaying an error about missing information in data element 4/17, even though the information was correctly entered in another instance of the same field.
Fix	The system was updated to eliminate the duplicate data element 4/17 field, ensuring that entered information is correctly recognized during the decision process.
Impact	Customs officers can now successfully grant 8F applications without encountering misleading errors about missing information, streamlining the processing of end-use authorizations.

7.53 Declarations with valid guarantees incorrectly triggered manual payment tasks

Ref: FT- 32574, PSD-8700	
Description	The system was incorrectly creating manual cash payment tasks for declarations that had valid guarantees, particularly affecting H2 declarations with dummy guarantees that satisfied business rules BR775 and BR776.
Fix	The system was updated to correctly recognize and process dummy guarantees, ensuring that declarations with sufficient guarantee coverage do not trigger unnecessary manual payment tasks.
Impact	Declarations with valid guarantees now proceed through the customs process without requiring unnecessary manual payment intervention, streamlining the clearance process for traders who have provided proper guarantee coverage.

7.54 Postal value field missing from H6 declarations

Ref: FT- 31964, PSD-7835	
Description	The data element 14 12 000 000 (Postal value) and its sub-elements were not visible in the Trader Portal interface for H6

	declarations, preventing users from entering this required information.
Fix	The system was updated to properly display the Postal value field and its sub-elements (Currency and Amount) in the Trader Portal interface for H6 declarations.
Impact	Users can now enter postal value information when creating H6 declarations, ensuring compliance with data requirements for postal shipments and enabling proper customs valuation.

8 Release 6.1.5-final

Environment	Release date
PROD	N/A
TFE02	30-01-2025

8.1 Error code: OE0007 when entering Goods Accounting of a Rejected declaration

Ref: PSD-7701	
Description	An error appears when going to the Goods Accounting tab on a rejected H3 declaration.
Fix	The underlying issue was fixed.
Impact	No error shows up anymore when going to said tab.

8.2 All amendments are accepted even though they should only be partially accepted

Ref: PSD-6161	
Description	When making multiple amendments where some are accepted and others are rejected, the solution accepts all the amendments instead of just the ones which were accepted.
Fix	The underlying issue was fixed.
Impact	The correct status for the individual amendments are now shown.

8.3 Missing data for Region of Destination CL10202

Ref: PSD-7249	
Description	The "Region of Destination" field (16 04 001 000) was displayed as an empty text field instead of a drop-down menu on goods shipment level. The same field on Goods Item level had the wrong code list attached to it so regardless of what was picked from it, it would cause a rejection when any country was picked from the list.
Fix	Region of destination was changed to a free text field on both levels and the correct code list is used when checking the field.
Impact	The "Region of Destination" field now functions correctly on both levels, preventing declaration rejections.

8.4 'Postal value' field not visible for H6 in Trader Portal UI

Ref: PSD-7835	
Description	The 'Postal value' field (D.E. 14 12 000 000) and its sub-elements were not visible in the TP UI for H6 declarations.
Fix	The underlying issue was fixed.
Impact	Users can now see and edit the 'Postal value' field and its sub-elements in the Trader Portal UI for H6 declarations, ensuring all necessary information is accessible.

8.5 When sending a H6 wrong D.E. is shown in Trader Portal UI

Ref: PSD-7464	
Description	According to EUCDM, D.E 13 14 031 000 refers to additional supply chain actor role. However, when creating a H6 declaration in TP UI, the additional supply chain actor role is displayed as D.E 13 16 031 000.
Fix	The underlying issue was fixed.
Impact	Additional supply chain actor role is referred to as D.E. 13 14 031 000

8.6 Additional declaration type not updated in UI after successful I2 GPR submission

Ref: PSD-7472	
Description	When submitting an I1 IM/E declaration, the additional declaration type did not change in the Trader Portal UI after a successful I2 GPR submission. It remained as IM/E instead of updating to IM/B.
Fix	The underlying issue was fixed.
Impact	The additional declaration type now correctly updates to IM/B in the TP UI after a successful I2 GPR submission.

8.7 Unable to amend H1 due to missing "taricCodeIdentifier" field

Ref: PSD-7823	

Description	In Trader Portal UI when attempting to amend an H1 declaration by adding or correcting goods items, the "taricCodeIdentifier" field was missing, preventing the completion of the amendment.
Fix	The underlying issue was fixed.
Impact	Users can now successfully amend H1 declarations in the TP UI, including adding or correcting goods items with the "taricCodeIdentifier" field visible and editable.

8.8   When sending a H1 a wrong codelist is used for Invoice currency

Ref: PSD-7555	
Description	When a H1 standard declaration is sent in the Trader Portal UI the Invoice currency field in group 14 shows options from the wrong codelist, displaying other units not pertaining to currency.
Fix	The underlying issue was fixed.
Impact	The drop down menu in "Invoice currency" shows a correct list of currency types.

8.9   Unable to remove 8f applications during Trader Portal submission

Ref: PSD-7532	
Description	When submitting a declaration with an attached 8f application in the Trader Portal UI, users were unable to remove the application before submission.
Fix	The underlying issue was fixed.
Impact	Users can now delete 8f applications before submitting a declaration in the Trader Portal UI, providing greater flexibility and control over the submission process.

8.10 DMS reports incorrect state to Manifest.

Ref: FT-34422	
Description	When presenting goods via Manifest, DMS incorrectly reported that the declaration was not in a state where presentation is allowed, even though it was.
Fix	The underlying issue was fixed.
Impact	DMS now correctly reports the state of the declaration to Manifest, allowing the presentation of goods to proceed without errors.

8.11 Misspelling in error message for amendment of temporary storage declarations.

Ref: PSD-9205	
Description	The error message "Fetch Extenderd Declaration Failed" displayed when trying to amend G4 and G4G3 declarations in Manifest UI was misspelled.
Fix	The underlying issue was fixed.
Impact	The error message is now correctly spelled as "Fetch Extended Declaration Failed," ensuring clarity and professionalism in the user interface.

8.12 B1 (export) Invalidation Reason Code 122 is not visible from Codelist

Ref: FT-34314	
Description	When creating an Invalidation Request for a B1 export declaration, Reason Code 122 is not visible, and is still shown as 22.
Fix	The underlying issue was fixed.
Impact	It is possible to choose reason Code 122 from the code list.

8.13 Cannot fill Delivery Items form for H4 after initial rejection.

Ref: PSD-9192	
Description	When a declaration gets rejected due to BR255_097 (Delivery Terms are missing), the user should be able to fill the Delivery Items form and amend the rejection. However, after filling the fields and submitting the declaration, the new fields were not passed, and the declaration could not be amended.
Fix	The underlying issue was fixed.
Impact	Users can now successfully amend H4 declarations by filling the Delivery Items form after an initial rejection, ensuring that the fields are correctly passed and the declaration can be amended.

8.14 Negative Numbers for number of packages does not give a warning

Ref: PSD-9168	
Description	When sending a G4 declaration and using negative numbers for number of packages, no warning or rejections is given.
Fix	The underlying issue was fixed.
Impact	Declarations with negative numbers in Number of Packages (18 06 004 000) gets rejected.

8.15 Discharging H3 with previous document referencing a G4G3 fails.

Ref: FT-34257	
Description	When discharging an H3 declaration with a previous document referencing a G4G3 declaration, the process fails due to missing number of packages and package type, triggering BR10014_019_1 validation error.
Fix	The underlying issue was fixed.
Impact	Users can now successfully discharge H3 declarations with previous document referencing a G4G3 declaration without encountering validation errors related to missing number of packages and package type.

8.16 Possible to accept both invalidation and manual cash payment.

Ref: PSD-9077	
Description	It was possible to grant both the invalidation request and manual cash payment work tasks simultaneously, leading to the financial settlement message being sent for collection of guarantee/duties even though the declaration was invalidated.
Fix	The underlying issue was fixed.
Impact	The system now correctly stops all tasks when an invalidation request is granted, preventing the financial settlement message from being sent inappropriately.

8.17 G4 declaration is rejected if D.E. 11 04 and D.E. 12 01 are not filled.

Ref: FT-34190	
Description	G4 declarations were being rejected if the specific circumstance indicator (D.E. 11 04 000 000) and previous document (D.E. 12 01 000 000) fields were not filled, despite these fields being optional and conditional respectively.
Fix	The underlying issue was fixed.
Impact	Users can now submit G4 declarations without filling D.E. 11 04 000 000 and D.E. 12 01 000 000, aligning with the specified requirements.

8.18 The field Amount to be covered has been implemented wrong.

Ref: PSD-9098	
Description	The field Amount to be covered (99 03 071 000) in H1 declarations had three issues: missing EUCDM reference number, text

	description not fully visible, and the picker allowed negative values instead of adhering to the n..16,2 format.
Fix	The underlying issue was fixed.
Impact	The field now displays the correct reference number, the text description is fully visible, and the picker adheres to the n..16,2 format, ensuring accurate data entry.

8.19 Document line item number not updated when its corrected.

Ref: PSD-9079	
Description	When correcting a declaration, the data for the "Document line item number" field (12 03 013 000) was not displayed in the Trader Portal UI.
Fix	The underlying issue was fixed.
Impact	The data for the "Document line item number" field is now correctly displayed when correcting a declaration, ensuring that all necessary information is visible to the user.

8.20 The date/time information of Date of validity is displayed inconsistently.

Ref: PSD-9083	
Description	The "Date of validity" field (12 03 011 000) displays different date/time information when creating and correcting a declaration in the Trader Portal UI.
Fix	The underlying issue was fixed.
Impact	The "Date of validity" field now displays the same date/time information consistently during both the creation and correction of a declaration, ensuring accurate and reliable data representation.

8.21 The internal declaration type GRE was accessible through the TP UI and B2B.

Ref: FT-34073	
Description	It was possible to submit a Goods Registration Entry (GRE) through the Trader Portal UI or B2B, which should only be created by customs officers through the internal system.
Fix	The underlying issue was fixed.
Impact	GRE submissions are now correctly restricted, preventing submission through the Trader Portal UI or B2B by unauthorized users.

8.22 Country of Preferential Origin Code is validated incorrectly.

Ref: PSD-9088	
Description	When sending a H1 using "Preference code" 400, the "Country of Preferential Origin Code" (16 09 001) should be validated against Code list 10236. However, it was incorrectly validated against Code list 10203.
Fix	The underlying issue was fixed.
Impact	The "Country of Preferential Origin Code" is now correctly validated against Code list 10236, ensuring accurate validation and allowing the creation of declarations with the correct preference code.

8.23 Sending an Invalidation & Repayment to a H1 triggers an irrelevant business rule.

Ref: FT-33935	
Description	When submitting a H1 end-use declaration and requesting an invalidation and repayment (4c), it would trigger an error message indicating that the validation rule BR_ADDM_0206_010 was not met, even though the fields mentioned in the error were not relevant to the remission data.
Fix	The underlying issue was fixed.
Impact	Users can now successfully request invalidation and remission (4c) for H1 declarations without encountering the erroneous validation rule error.

8.24 Supplementing an I1 IMB is incorrectly rejected.

Ref: PSD-8957	
Description	When supplementing an I1 IMB declaration in the Trader Portal UI after the goods have been released, the supplement was rejected with an error indicating a domain error in "declaredDutyTaxFees" despite no changes being made to tis field.
Fix	The underlying issue was fixed.
Impact	Users can now successfully supplement I1 IMB declarations without encountering erroneous rejections related to "declaredDutyTaxFees."

8.25 DE 16 09 001 is validated by the wrong code list.

Ref: PSD-9099	
Description	The "Country of Preferential Origin Code" field (DE 16 09 001) was incorrectly validated against Codelist 10203 instead of the correct Codelist 10236, causing declarations to be rejected despite selecting valid options from the dropdown menu.
Fix	The underlying issue was fixed.
Impact	The "Country of Preferential Origin Code" field is now correctly validated against Codelist 10236, ensuring that valid declarations are accepted.

8.26 The system stuck at accepted when re-using an old I2EIDR.

Ref: PSD-8845	
Description	When re-using an old I2EIDR in parallel submissions of H1 IMZ declarations, the system allowed multiple declarations to be accepted, causing one of the declarations to get stuck at the control state.
Fix	The underlying issue was fixed.
Impact	The system now correctly prevents the re-use of an I2EIDR for multiple declarations, ensuring that only one declaration can proceed, and subsequent attempts are rejected.

8.27 Changing the invoice amount of an I1 using a Supplement causes an error.

Ref: PSD-8792	
Description	When a supplementary declaration was submitted for an I1 declaration via the Trader Portal UI with a changed invoice amount, the system rejected this supplement with a domain error, indicating an invalid value.
Fix	The underlying issue was fixed.
Impact	Users can now successfully change the invoice amount when submitting a supplementary declaration for an I1 declaration, ensuring that updates to the invoice value are accepted.

8.28 Declaration without elements in Location of Goods is accepted

Ref: FT-33768	
Description	An I1 declaration which did not contain mandatory data in Data Element group 16 (16 15) was not rejected as expected.

Fix	The underlying issue was fixed.
Impact	The mandatory data in Data Element group 16 (16 15) is now checked correctly.

8.29 Transport document validation issue

Ref: FT-32640	
Description	The declaration was incorrectly rejected for violating BR255_091 when transport documents were declared at both GS and SI levels.
Fix	The underlying issue was fixed.
Impact	Declarations with transport documents at both GS and SI levels are now correctly accepted.

8.30 Guarantee type incorrectly marked as mandatory with additional procedure A04.

Ref: FT-32563	
Description	The declaration was incorrectly rejected for missing a guarantee type when the additional procedure was A04.
Fix	The underlying issue was fixed.
Impact	Declarations with additional procedure A04 no longer require a guarantee type and are correctly accepted.

8.31 BoD button being double-clicked when trying to fill a new value

Ref: PSD-7838	
Description	The "Apply automatic extension" and "Use bill of discharge" check-boxes were being double-clicked when trying to fill a new value. This meant each time a check-box is clicked once buy the user it is automaticly un-checked again making it verey hard to add to or update these fields.
Fix	The underlying issue was fixed.

Impact	The buttons "Apply automatic extension" and "Use bill of discharge" now function correctly without double-clicking when filling in a new value.

8.32 Black page after request in H5 declaration

Ref: FT-32488	
Description	When sending a H5 Amendment declaration, the page turns black when "Group 14 Valuation Information/Taxes" is clicked.
Fix	The underlying issue was fixed.
Impact	It is possible to navigate to group 14 and request a correction on group 14.

8.33 I1 Amendment cannot be submitted in TP UI

Ref: PSD-7778	
Description	After submitting an I1 declaration via B2B, the amendment of the declaration could not be submitted via TP UI.
Fix	The underlying issue was fixed.
Impact	I1 amendments can now be successfully submitted via TP UI.

8.34 Remove manual acceptance on guarantee type 2 (H3 and H4)

Ref: FT-32455	
Description	H3 and H4 declarations with guarantee type 2 were incorrectly taken out for both manual acceptance and manual release.
Fix	The underlying issue was fixed.
Impact	H3 and H4 declarations with guarantee type 2 now proceed directly to manual release without requiring manual acceptance.

8.35 A2 to discharge goods from a G4G3 is accepted before the 14 days "deadline"

Ref: PSD-7765	
Description	An A2 declaration to re-export goods from a G4G3 was incorrectly accepted before the required 14-day period had passed.
Fix	The underlying issue was fixed.
Impact	A2 declarations are now correctly rejected if submitted within 14 days of the G4G3 submission, ensuring goods are not prematurely discharged from goods accounting.

8.36 After correction work task has been completed user cannot find action correction in TP-UI

Ref: PSD-7758	
Description	When a correction worktask is completed, the action correction is not availabe for the user in TP-UI.
Fix	The underlying issue was fixed.
Impact	The Correction action is available.

8.37 Retrieve notification from different SubmitterID on B2B

Ref: PSD-7772	
Description	Users were able to retrieve notifications from declarations submitted by a different SubmitterID.
Fix	The underlying issue was fixed.
Impact	Users can no longer retrieve notifications from declarations submitted by a different SubmitterID.

8.38 Calculated Customs Debt number is not rounded

Ref: PSD-7242	
Description	When submitting a H1 declaration with customs debt, visiting the customs debt under the customs data tab displays the calculated number with an excessive amount of decimals rather than two decimal points.
Fix	The underlying issue was fixed.
Impact	The calculated customs debt is now restricted to two decimal points.

8.39 Invalid IE512 got stuck when submitting through TP-UI with no pointer

Ref: PSD-7759	
Description	Submitting an invalid IE512 declaration through TP-UI caused the UI to get stuck without providing any pointer error, and resulted in a 500 error code.
Fix	The underlying issue was fixed.
Impact	When submitting an invalid IE512 declaration, a pointer error is now provided, and there is no error code 500.

8.40 Wrong units in Previous Document in Request for Disposal

Ref: PSD-7700	
Description	The items in measurement units and qualifiers list (12 01 005 000) in Previous document contains currencies instead of the correct units.
Fix	The underlying issue was fixed.
Impact	The correct units are displayed.

8.41 List in Amendment reason is automatically cleared

Ref: PSD-7621	
Description	When submitting a Correction declaration, in the Amendment reason, after selecting a reason and typing a character, the search bar is automatically cleared, and the list of reasons disappears.
Fix	The underlying issue was fixed.
Impact	Typing does not clear the search bar and the amendment reasons are listed.

8.42 The Warehouse keeper task is not disabled

Ref: ERMIS-45194	
Description	The warehouse keeper task was incorrectly active when submitting a G4G3 declaration, despite it to be disabled.
Fix	The underlying issue was fixed.
Impact	The warehouse keeper task is now correctly disabled when submitting a G4G3 declaration.

8.43 H3 IMZ accepted despite referring to rejected I2EIDR

Ref: PSD-7660	
Description	When a H3 IMZ declaration is submitted referring to a rejected I2EIDR it gets mistakenly accepted
Fix	The underlying issue was fixed.
Impact	H3 IMZ declarations that refer to a rejected I2EIDR are now correctly rejected.

8.44 CWMINV missing from B1 after receiving Major discrepancies result

Ref: FT-32229	
Description	The CWMINV notification was not sent to the Trader Portal after a B1 was submitted with a major discrepancies result.
Fix	The underlying issue was fixed.
Impact	CWMINV notifications are now correctly sent to the Trader Portal when a B1 declaration is submitted.

8.45 Request for disposal for G3G4 declaration does not register in additional messages

Ref: PSD-7572	
Description	When submitting a request for disposal of goods for a G3G4 declaration, the message did not register in the additional messages.
Fix	The underlying issue was fixed.
Impact	Requests for disposal of goods for G3G4 declarations now correctly register in the additional messages.

8.46 Sending incorrect I1 supplementary to an I1 simplified gets accepted.

Ref: PSD-7481	
Description	Several versions of I1 supplementary which was incorrect with respect to their I1 simplified declaration was accepted.
Fix	The underlying issue was fixed.
Impact	The system now correctly rejects malformed I1 supplementary

8.47 Missing response when sending a IEI86A Create Goods Registration Request

Ref: FT-34424	
Description	When sending a IEI86ACreateGoodsRegistrationRequest without filling in the recetacleIdentificationNumber, a response is expected as it is optional, however, in this case no response is received.
Fix	The underlying issue was fixed.
Impact	A response is sent when the receptacle identification number is not filled in.

9 Release 6.1.5-RC12

Environment	Release date
PROD	N/A
TFE02	30-01-2025

9.1 Sending an invalidation and repayment request through the Trader Portal UI gets it wrongfully rejected.

Ref: PSD-8985, PSD-9253	
Description	When a declaration is invalidated with a 4C invalidation and re-payment request through the Trader Portal the request gets re-jected. It also receives an error message that says a 4C invalidation and repayment request should be sent.
Fix	The underlying issue was fixed.
Impact	The user can now send a 4C invalidation and repayment request through the Trader Portal UI without it being rejected.

9.2 Missing input fields in the Trader Portal UI under Previous documents

Ref: PSD-8796	
Description	When looking under the tab Previous documents of a declaration on Trader portal some of the sub-elements are not represented with a input field. There is also an input field value which does not correspond to a sub-element of Previous document.
Fix	The underlying issue was fixed.
Impact	The tab Previous documents now has input fields for all its sub-elements.

9.3 Incorrect input fields in the Trader Portal UI under Transport Documents

Ref: PSD-8811	
Description	When looking under the tab Transport Documents of a declaration on Trader portal there are input fields for sub-elements which do not belong in the Transport Documents tab.
Fix	The underlying issue was fixed.
Impact	Only the correct sub-elements can be seen under Transport Document.

9.4   Declarations without either UN/LOCODE or country code and location name gets wrongfully accepted

Ref: PSD-9045	
Description	Sending a declaration without UN/LOCODE (14 01 036 000), or location name (14 01 037 000) would wrongfully be accepted. This is incorrect as UN/LOCODE (14 01 036 000) should in general be filled out unless the place the delivery destination does not have a UN/LOCODE then both the country code (14 01 020 000) and location name (14 01 037 000) must be filled out.
Fix	The underlying issue was fixed.
Impact	Declarations with incomplete trade terms (14 01) won't be accepted.

9.5   When using charge type code AK for air transport declarations the air freight is miscalculated.

Ref: PSD-9028	
Description	When using the charge type code (14 04 008 000) AK and transport mode 4 "Air transport" the system calculated the air freight of the package incorrectly.
Fix	The method of calculating air freight was revised.
Impact	The freight amount for declarations are now calculated correctly

9.6   When amending via TP UI, sequence numeric validation error occurs

Ref: PSD-9107	
Description	Submitting a H1 Amendment with a change of the gross mass on a Goods Items to a H1 Declaration via the Trader Portal UI results in a validation error unrelated to the change made.
Fix	The underlying issue was fixed.
Impact	The user would now be able to change the gross mass without receiving a validation error.

9.7   When accepting an invalidation while under manual release the declaration gets stuck

Ref: PSD-8801	

Description	For a H1 declaration under manual release, an invalidation request is submitted via Trader Portal API. The manual release work task changes to status 'interrupted' as expected, but the declaration does not get invalidated.
Fix	The underlying issue was fixed.
Impact	Declarations no longer gets stuck if invalidated while its under manual release.

9.8 An I2 Presentation on a Pre-lodged results in a validation error with Goods Items via Trader Portal UI

Ref: PSD-9048	
Description	Submitting a I2 Presentation with the Goods Item Preferences field filled in on a Pre-lodged via the TP UI causes a validation error stating that the preference is missing.
Fix	The underlying issue was fixed.
Impact	The user would now be able to provide a preference without receiving a validation error

9.9 Improper Deadlines when submitting H3 declarations

Ref: PSD-8812	
Description	When a H3 declaration is submitted with a standing authorization, all the timers after release have a deadline of only 10 days.
Fix	The underlying issue was fixed.
Impact	The deadlines should be proper now.

9.10 Unclear Error Message when invalidating a H1 Standard

Ref: PSD-8963	
Description	When invalidating a H1 standard and adding: 1. In group 8 under toldbeløb 8 add DKK and amount A00 amount 0 2. In group 8 under toldbeløb 8 add DKK and amount B00 amount 6479,2 A undiscernible error message is displayed.
Fix	The error message was changed.

Impact	Will now display an error message displaying: "The VII/7 should be larger or equal to the sum of VIII/8 amounts."

9.11 Invalid DE in Supporting Documents 12 03

Ref: PSD- 8807	
Description	The tab 'Supporting Documents 12 03' has DE 12 12 080 which is not supposed to be there and missing the data elements DE 12 03 005, 12 03 006, 12 03 012, DE 12 03 014 and DE 12 03 079
Fix	The underlying issue was fixed.
Impact	The DE 12 12 080 is not seen, whilst DE 12 03 005, 12 03 006, 12 03 012, DE 12 03 014 and DE 12 03 079 are shown.

9.12 Reminder Notification for discharge deadline is setup wrong

Ref: PSD-8765	
Description	When submitting a 'H' declaration with an 8f application the reminder notification is setup incorrectly. When setting the time to discharge to 60 days the reminder notification is set to expire in 59 days when it should be set to the time to discharge minus 30 days.
Fix	The underlying issue was fixed.
Impact	The MAR time window reminder notification is set to expire 30 days prior to the time to discharge set.

9.13 Mapping issues between Previous Document Values on a G4G3 Declaration

Ref: PSD-9035	
Description	When submitting a G4 declaration and then using the assigned MRN for a G3 declaration, the Previous document section under House Consignment (in the G3 Declaration) does not display the previous MRN.
Fix	The underlying issue was fixed.
Impact	The MRN of the G4 Declaration is shown correctly in Previous documents.

9.14 Invalid Data Element in Authorization 12 12

Ref: PSD- 8813	
Description	The tab Authorizations 12 12, shows DE 12 03 010, 12 03 011 and 12 03 013 which are not valid according to EUCDM.

Fix	The underlying issue was fixed.
Impact	DE 12 03 010, 12 03 011 and 12 03 013 are not seen.

9.15 Gross mass is not shown when exporting a H7 declaration to PDF

Ref: PSD- 8814	
Description	When a H7 declaration is exported to PDF, Gross mass is not shown on a declarations level.
Fix	The underlying issue was fixed.
Impact	The Gross Mass is visible in the exported PDF.

9.16 Disappearing declaration for first time users of Trader Portal UI

Ref: PSD-8551	
Description	**This was thought to be fixed on RC11 but failed testing at a later point. The issue should now be resolved.** When a user access TP-UI for the first time they can't upload declarations and the declaration disappear.
Fix	The underlying issue was fixed.
Impact	The declaration is visible and can be submitted the first time the user uploads.

9.17 When entering a G4 in the UI Group 13 13 is Missing Data Elements

Ref: PSD-8616	
Description	When entering a G4 declaration into the Trader Portal UI, DE 13 13 is missing some mandatory elements.
Fix	The underlying issue was fixed.
Impact	The missing DEs are visible both on a Master Consignment level and house consignment level.

9.18 Error message overflows text box when submitting a declaration with invalid data

Ref: PSD-8958	
Description	When submitting a H1 declaration via the Trader Portal UI containing invalid data, the text box containing the error message overflows.
Fix	The underlying issue was fixed.

Impact	The error message no longer overflows the text-box and block other content.

9.19 H1 Declaration reaches 'Clearance Provided' with missing mandatory data elements

Ref: PSD-8952	
Description	When submitting a H1 Declaration, it is possible to send through the declaration and receive the status of 'Clearance Provided (Goods Released)' even when missing mandatory data elements stated by the EUCDM.
Fix	The underlying issue was fixed.
Impact	Now when sending in the declaration with missing mandatory data elements, the declaration is correctly rejected.

9.20 Tariff Additional Code and the National Code should be optional for 4C

Ref: PSD-8960	
Description	When submitting a 4c form, the tariff additional code and national code should both be optional. However, if they are omitted it results in an error stating that they are required
Fix	The underlying issue was fixed.
Impact	Both the tariff additional code and national code can be omitted without causing an error

9.21 Preference code is deleted when H3 is presented in TP UI

Ref: PSD-8954	
Description	When a H3 pre-lodged declaration was submitted with the element preference code, and it has its goods presented via the Trader Portal UI the preference code is deleted.
Fix	The underlying issue was fixed.
Impact	Preference is declared with value 100

9.22 No CWMTAX sent when sending a H1 pre-lodged

Ref: PSD-8876	

Description	When submitting a H1 pre-lodged, no CWMTAX notification is sent to the trader for first round of customs calculations.
Fix	The underlying issue was fixed.
Impact	A CWMTAX message is sent and received by the trader.

9.23 Invalidation request for a G4 Pre-lodged is not granted automatically

Ref: FT-33804

Description	According to the solution, if an invalidation request concerns a pre-lodged declaration, the invalidation request is automatically granted and the status of the declaration should be set to cancelled, however in this case a work task is created instead.
Fix	The underlying issue was fixed.
Impact	Now when the invalidation request is sent for a pre-lodged declaration, it is automatically granted and the status is set to cancelled.

9.24 I1 rejected without any reason or error code

Ref: PSD-8803

Description	When an I1 declaration was rejected no message communicating the reason for the rejection was sent to the sender.
Fix	The underlying issue was fixed.
Impact	A rejection reason is communicated when a submitted declaration gets rejected.

9.25 Addition AK system is unable to handle countries with more than 1 zone

Ref: FT-32525

Description	When using AK (Transport costs, loading and handling charges and insurance costs up to the place of introduction in the European Union) there is not more than 1 zone.
Fix	The underlying issue was fixed.
Impact	Countries (such as Canada) would have more than one zone.

9.26 Addition AK calculations are not correct

Ref: PSD-8009

Description	When using AK in D.E. 14 04 with a mode of transport as '4 (Air Transport), the value is calculated by the value in 14 04 multiplied by 50% added to the value in 14 08 which is incorrect.
Fix	The underlying issue was fixed.

Impact	The values in D.E. 14 04 (1000) and D.E. 14 08 (1000) are added together (2000).

10 Release 6.1.5-RC11

Environment	Release date
PROD	N/A
TFE02	16-12-2024

10.1 Uploading Bill of Discharge to DMS Online makes the page go blank

Ref: PSD-8951	
Description	When uploading a Bill of Discharge (BoD) to an H1 declaration in DMS Online, the page became blank.
Fix	The underlying issue was fixed.
Impact	Submitting a BoD does not make the page go blank.

10.2 DMS Online functions disabled upon submitting invalid Invalidation

Ref: PSD-7852	
Description	When sending an invalid Invalidation request a CWMREJ message appeared. Closing this message caused the page to get stuck and not be able to be moved due to a missing scrollbar.
Fix	The underlying issue was fixed.
Impact	The message can be closed, and the scrollbar appears correctly on the page.

10.3 Lack of notifications upon timer expiration

Ref: PSD- 8924	
Description	When a user submits a G4G3 and lets the timer expire, no work task for ad-hoc discharge was created and no notification of this was sent to the user.
Fix	The underlying issue was fixed
Impact	The work task is now successfully created, and the relevant parties will receive the relevant notifications.

10.4 Translation error of time from English to Danish in Bill of Discharge

Ref: FT-33925	

Description	In **A163** (8f) there was a translation error from English to Danish, where "months" was incorrectly translated to "days".
Fix	Fixed the underlying issue
Impact	"Months" has been changed to "days" in the Danish translation of the A163.

10.5 The user is able to discharge from unclaimed consignment

Ref: PSD-8890	
Description	The user was able to discharge from a G4G3 in status Unclaimed, which should not be possible.
Fix	Fixed the underlying issue
Impact	The discharge is rejected when attempting to discharge a G4G3 in status Unclaimed.

10.6 Amendment automatically accepted for G4 after goods have been presented

Ref: FT-33882	
Description	When submitting an amendment for G4 after a G3 has been presented, Goods Released was automatically accepted.
Fix	The underlying issue has been fixed
Impact	An amendment submitted to a G4 after a G3 has been presented is successfully submitted, and a Manual Handling Task is Created

10.7 Lock symbol not behaving as expected

Ref: PSD-8878, PSD-8809	
Description	The lock symbol displayed on declarations in DMS Online was only displayed in a locked state when there were open work tasks or when the declaration was rejected/invalidated.

Fix	The underlying issue has been fixed.
Impact	The lock symbol is shown in the locked state when control of the declaration is in progress.

10.8 H6 - D.E. 14 10 000 000 CustomsValuation erroneously set to mandatory in the XSD, contradicting EUCDM

Ref: FT-33869	
Description	According to the H6 XSD, CustomsValuation is a required element, but according to EUCDM it is not.
Fix	CustomsValuation has been removed from H6 XSD.
Impact	Valuation method is not present in the H6 XSD.

10.9 DKW1209/BR_VALI_10085_37 showing null value and empty

Ref: FT-33864	
Description	The BR_VALI_10085_37 Error message was empty. DMS Online did not display any information about the error.
Fix	The underlying issue has been resolved.
Impact	The validation results should now be visible for this error message.

10.10   I2 standard not visible in TP-UI even though it is visible in CWM-UI

Ref: PSD-8849	
Description	I2 standard declarations were not visible in the Trader Portal UI (TP-UI) drop-down menu, but were visible in the Customs Web UI (CWM-UI).
Fix	The underlying issue has been fixed.
Impact	TP-UI and CWM-UI both display I2 standard declarations in the drop-down menu.

10.11   Pre-lodged declarations did not change type in TP-UI even after goods had been presented. (All import declarations)

Ref: PSD-8844	
Description	When sending an I2 goods presentation to any pre-lodged import declaration, to change it to a standard declaration, the declaration type field on the UI did not update from IM/D (CO/D for H5) to IM/A (CO/A for H5).
Fix	The underlying issue has been fixed.
Impact	The UI now updates the declaration type field to display that the declaration has become a standard declaration.

10.12   User could occasionally not delete Goods Items via the UI

Ref: PSD-8843	
Description	While editing goods items via the UI, multiple goods items with the same number can be created. This resulted in the user not being able to delete any goods items after this.
Fix	The underlying issue has been fixed.
Impact	All goods items can now be deleted, and goods items added via the UI obtain the correct sequence number.

10.13   Exporting a PDF in TP-UI is not possible

Ref: PSD-9057	
Description	When exporting a PDF for a Clearance Provided (goods released) declaration in TP UI an error message saying something went wrong appears. This has also been observed when sending a H1 and H4
Fix	The underlying issue has been resolved
Impact	The PDF will now open

10.14 Opening rejected declaration in TP-UI gives blank page

Ref: FT-34023	
Description	When a H2 declaration is submitted via TP-UI, the declaration is rejected, but when opening the rejection from search results a blank white page is shown.
Fix	The underlying issue has been resolved
Impact	The declaration overview page is reached.

10.15 Error DK1098 triggering unproperly

Ref: FT-33830	
Description	H3 should be rejected with a DK1098 error when its previous procedure is 71 and Warehouse is empty which it currently does not.
Fix	The underlying issue has been resolved
Impact	A H3 declaration with an empty warehouse is rejected and validation error DK1098 is thrown.

10.16 Fields resetting when adding/editing (VII/8 Duty) Types in RRA Creation

Ref: PSD-8789	
Description	When adding to (VII/8) duty types, fields in the RRA additional message are reset.
Fix	The underlying issue has been resolved.
Impact	The value is added and everything else stays as it is.

10.17 H4 with 8a authorization rejected

Ref: PSD-8806	
Description	Submitting a H4 declaration declaring an 8a authorization in D.E. 12 12 000 000, the declaration is rejected for violating BR10143_003: Authorization with type C601 does not contain authorizationElement: 4/18a in AuthorizationDetailList.
	Looking up the data element in EUCDM, it looks to be referring to a data element which codes for the requirement to submit a bill of discharge.
Fix	The underlying issue has been resolved.

Impact	H4 declarations with 8a authorization can now be submitted.

10.18   The field Measurement unit in TP-UI displays currencies instead of types of measurement

Ref: PSD-8793	
Description	When editing a declaration through TP-UI the field Measurement unit (03 040 005) under group 14, (03) calculation of tax display types of currencies instead of types of measurements.
Fix	The underlying issue has been resolved.
Impact	The user can now edit the measure unit field via the UI.

10.19   Missing Translation of 8F – D.E. 4/9

Ref: FT-33757	
Description	There is a lacking translation of the data element 4/9 in 8F application. The English version reads "Place(s) of processing or use" and is translated to "Sted hvor forarbejdningen foregår" in Danish. Hence the Danish translation lacks the wording "or use" is missing, which is confusing if the application is for H3 temporary admission. "Place(s)" is also translated as "sted" which is misleadning since multiple places can be provided.
Fix	Updated the translation to "Sted(er) hvor forarbejdningen foregår eller varen anvendes"
Impact	"Sted hvor forarbejdningen foregår" is changed to "Sted(er) hvor forarbejdningen foregår eller varen anvendes"

10.20   Pre-lodged H2 is registered with a rejection error message

Ref: FT-33751	
Description	Submitting the attached H2 pre-lodged results in status "registered". When checking the Message to trader CWMRCV a rejection reason is listed, that should result in a rejection. It seems the error message is actually just a warning for the declaration being selected for manual acceptance, but in that case the message should be adjusted to reflect a nonblocking-warning.
Fix	Change rejecting error code to warning When a declaration does not have a guarantee, it used to give the error code CWM11050 but is now DKW10053.

Impact	The error code mentioned has been renamed to DKW10053.

10.21   When sending an H1 with an end-use Authorization it is rejected

Ref: FT-33707	
Description	When sending an H1 with an end-use (8c) authorization N990 the declaration is rejected for not containing an element relating to 8f.
Fix	The underlying issue has been solved.
Impact	Users can now send H1 end-use declarations.

10.22   H7 getting stuck due to backend issues

Ref: FT-33683	
Description	When submitting an H7 declaration with certain procedure combination, a backend issue results in the declaration getting stuck.
Fix	The underlying issue has been resolved.
Impact	The declaration proceeds through Tariff and other validations without getting stuck.

10.23   Unable to submit Quota order number for an additional message (COR/SUP) as a Trader Portal-user

Ref: PSD-8615	
Description	If the quota order number (99 01) has leading zeros, the number is automatically simplified resulting in the value being invalid.
Fix	Allow quota text field to have leading zeros
Impact	Users can now enter quota order numbers with a proper format

10.24   Some G4G3 declarations are getting stuck after Risk

Ref: PSD-8690	
Description	Some G4G3 declarations are getting stuck after Risk assessment.
Fix	The underlying issue has been fixed.

Impact	The user can now send a G4G3.

10.25   All Goods Items on H2 declaration are deleted when the first Goods Item is deleted.

Ref: PSD-8815	
Description	If a pre-lodged H2 declaration is sent which contains 3 Good Items, and the first Goods Item is deleted, it will give an error, and the goods item is not deleted.
Fix	The underlying issue is resolved.
Impact	The first Goods Item is deleted and Goods Item 2 and 3 are left untouched.

10.26   Declarations disappear when a first time user submits to Trader Portal

Ref: PSD-8551	
Description	When a user accesses Trader Portal for the first time, the user would not be able to create a new declaration right away.
Fix	The underlying issue is resolved
Impact	The declaration is visible and can be submitted the first time the user uploads a file

10.27   Timer doesn't change according to first submitted G4G3 when submitting a second G4G3

Ref: PSD-8776	
Description	When a G4G3 is created that refers to an already submitted, older G4G3, the new G4G3's timer is not set based on the older G4G3's timer. Instead, the new G4G3's timer is created as its own new timer.
Fix	The underlying issue has been resolved.

Impact	The new G4G3's timer is now set based on the referred G4G3's timer.

10.28   A H6 declaration with a supporting document on goods items level gets rejected.

Ref: FT-33094	
Description	If a H6 has a correct supporting document Y929 or C644 on goods item level instead of shipment level the declaration gets rejected for not including either document Y292 or C644.
Fix	The underlying issue has been fixed.
Impact	Users are able to send an H6 with its supporting document on goods item level.

10.29   When trying to add an Additional reference to a declaration some document types are missing.

Ref: FT-32852	
Description	When trying to add an Additional reference to a declaration the document types Y792, Y160, Y930, Y904, Y797, Y798, Y799 and Y163 and others are missing.
Fix	The underlying issue has been fixed.
Impact	It is now possible to add the missing type codes for an additional reference.

10.30   Information of attached documents not shown after declaration is accepted

Ref: FT-32472	
Description	When attaching documents to declaration in TP-UI the information was not displayed.
Fix	The underlying issue was fixed.

Impact	It is now possible to see the information on attached documents in TP-UI.
