1 Preconditions

To complete the functional test case for “Notification of Intended Movement (NIM)”, the company must have an established connection to the AS4-gateway, and have a functioning system user to DMS Import, see [Connectivity Guide & System Guide](#).

Furthermore, ensure that you for this test case have the correct URLs, Services, and Actions, as seen below. In place of {CVR} and {UUID}, fill out your own CVR and UUID in the URL below. While the URLs and Services are the same for all the test cases, the Actions however, will change depending on the test case you are performing, please keep an eye out that you have the correct Action for the test case in hand. Additionally, the G4G3 Declaration should be in state Accepted, Under Storage or Under Customs Supervision to successfully submit a NIM notification. If the declaration is in any other state, the request will be rejected.

To submit the XMLs for this test case, use the following endpoint:

URL	TFE Service	Action
https://secureftpgatewaytest.skat.dk:6384/exchange/CVR_{CVR}_UI_{UUID}	DMS.Import2	Manifest.Submit
https://secureftpgatewaytest.skat.dk:6384/exchange/CVR_{CVR}_UI_{UUID}	DMS.Import2	Manifest.Movement Intended

For retrieving the notification, use the following endpoint:

URL	TFE Service	Action
https://secureftpgatewaytest.skat.dk:6384/exchange/CVR_{CVR}_UI_{UUID}	DMS.Import2	Notification

Please ensure that the “**Test Case – G4G3 Temporary Storage with Goods Presentation**” has been completed **before** you try to complete the “**Test Case – Notification of Intended Movement (NIM)**” scenarios.

2 Process flow

The process flow for a Notification of Intended Movement request can be seen Figure 1 below:

Figure 1: Process flow for Notification of Intended Movement (NIM)

3 Test Scenarios

To complete this test case, test scenario 1 and 2 must be passed successfully. Descriptions and specifics for each test can be found in the coming sections. Be sure to go through the scenarios thoroughly. It is recommended that you use the attached files to test the notifications.

Test no.	Test scenario	Passed/Failed
1	Submit Notification of Intended Movement, which is accepted	☐
2	Submit Notification of Intended Movement, which is rejected	☐

3.1 Description of test scenarios

The following sections will describe the aim of each specific scenario and provide the desired results of the test scenarios. It is worth noting that there can be changes in the notifications provided by DMS Import as the solution is still in development.

The purpose of the test scenarios is to ensure your connection to the system, and that you as a company can receive the correct notifications when sending in XMLs. Each step describes what you need to do when going through the test case. In the folder where you found this test case document an XML corresponding to the acceptance test case will be available. This can be adapted for the rejection case.

3.2 Test scenario 1 – Acceptance

The aim of this scenario is to get a notification that the Notification of Intended Movement XML has been received.

The following table shows the necessary test steps for completing this scenario as well as expected results. For the first step it is recommended using the provided declaration **XML** found in the Test Case folder. Secondly, make sure that **MRN** corresponds to the G4G3 – Temporary Storage with Goods Presentation declaration, and the Submitter field is correct (this is done by putting your **CVR** in the Submitter/Name and Submitter/ID fields). The field **DeclarantEORI** should also be filled out with the corresponding EORI number for the Declarant. The placeholders are denoted in the XML by double curly brackets {{placeholder}}.

Step no.	Description of steps	Expected result	Passed
1	Use a G4G3 Temporary Storage with Goods Presentation XML (you can use the G4G3 Temporary Storage with Goods Presentation XML from the G4G3 test case). It is found within the G4G3 Temporary Storage with Goods Presentation folder that is found in the parent directory at G4G3 Test Cases (remember to replace the placeholders)	You should have the test XML ready for the next step	☐
2	Submit the declaration using the conditions found under Pre-conditions	The declaration should be sent to the system	☐
3	Pull the notifications	You should be able to pull the notification from the system	☐
4	Acceptance of G4G3 submission of Goods Presentation request by receiving the CWMACC and CWMROG notification	Receive a CWMACC and CWMROG notification	☐
5	Use the provided “Test Case – Notification of Intended Movement” XML found in the test case folder (remember to replace the placeholders – {{MRN}} should match the MRN from the initially submitted G4G3 Temporary Storage with Goods Presentation declaration).	Find the Notification of Intended Movement XML in the G4G3 test case folder	☐
6	Submit the request using the conditions found under Pre-conditions	The request should be sent to the system	☐
7	Pull the notifications	You should be able to pull notification from the system	☐
8	Successful validation of submission of the request by receiving the CWMRCV notifications.	You should receive the CWMRCV notifications.	☐

3.3 Test scenario 2 – Rejection

The aim of this scenario is for the EO to get a notification that the Notification of Intended Movement XML has been rejected.

The following table shows the necessary test steps for completing this scenario as well as expected results. For the first step it is recommended using the provided declaration **XML** found in the Test Case folder. Secondly, make sure that **MRN** corresponds to the G4G3 – Temporary Storage with Goods Presentation declaration, and the Submitter field is correct (this is done by putting your **CVR** in the Submitter/Name and Submitter/ID fields). The field **DeclarantEORI** should also be filled out with the corresponding EORI number for the Declarant. The placeholders are denoted in the XML by double curly brackets {{placeholder}}.

Step no.	Description of steps	Expected result	Passed
1	Use a G4G3 Temporary Storage with Goods Presentation XML (you can use the G4G3 Temporary Storage with Goods Presentation XML from the G4G3 test case). It is found within the G4G3 Temporary Storage with Goods Presentation folder that is found in the parent directory at G4G3 Test Cases (remember to replace the placeholders)	You should have the test XML ready for the next step	☐
2	Submit the declaration using the conditions found under Pre-conditions	The declaration should be sent to the system	☐
3	Pull the notifications	You should be able to pull the notification from the system	☐
4	Acceptance of G4G3 submission of Goods Presentation request by receiving the CWMACC and CWMROG notification	Receive a CWMACC and CWMROG notification	☐
5	Use the provided “Test Case – Notification of Intended Movement” XML found in the test case folder (remember to replace the placeholders – {{MRN}}) should match the MRN from the initially submitted G4G3 Temporary Storage with Goods Presentation declaration).	Find the Notification of Intended Movement XML in the G4G3 test case folder	☐
6	Adapt the Notification of Intended Movement with the information with the invalid data in the element X as shown in section Fejl! Henvisningskilde ikke fundet. to ensure rejection of the XML.	Adapt the Notification of Intended Movement XML in the G4G3 test case folder or use your own	☐
7	Submit the declaration using the conditions found under Pre-conditions	The declaration should be sent to the system	☐
8	Pull notifications	You should be able to pull notification from the system	☐
9	Rejection of a submission of the request by receiving the CWMREJ notification	Receive the CWMREJ notification and pass the test	☐
